## LIST OF TABLE

Table		Page
1	Sugar content of some ripe fruits.	13
2	Average ascorbic acid content of fruits.	17
3	Change in fresh weight (gm) of fruit of Anna apple during 2 <sup>nd</sup> to 16 <sup>th</sup> week after full bloom.	35
4	Change in width (cm) of fruit of Anna apple during 2 <sup>nd</sup> to 16 <sup>th</sup> week after full bloom.	36
5	Change in length (cm) of fruit of Anna apple during 2 <sup>nd</sup> to 16 <sup>th</sup> week after full bloom.	37
6	Change in volume (cm <sup>3</sup> ) of fruit of Anna apple during 2 <sup>nd</sup> to 16 <sup>th</sup> week after full bloom.	38
7	The average specific gravity of fruit of Anna apple during 2 <sup>nd</sup> to 16 <sup>th</sup> week after full bloom.	39
8	The average flesh firmness (lb., Kg) of fruit of Anna apple during 7 <sup>th</sup> to 16 <sup>th</sup>	

	week after full bloom by using Effegi pressure tester (0.8 cm diameter plunger).	40
9	The average total soluble solids (%) of fruit of Anna apple during 5 <sup>th</sup> to 16 <sup>th</sup> week after full bloom by using Atago hand refractometer.	41
10	The average titratable acidity (% malic acid) of fruit of Anna apple during 5 <sup>th</sup> to 10 <sup>th</sup> week after full bloom.	42
11	The average total soluble solids and titratable acidity ratio (TSS/TA ratio) of fruit of Anna apple during 5 <sup>th</sup> to 16 <sup>th</sup> week after full bloom	43
12	The average vitamin C content (mg/100 g fresh weight) of fruit of Anna apple during 5 <sup>th</sup> to 16 <sup>th</sup> week after full bloom.	44
13	The average total chlorophyll content (mg/gm peel) of fruit of Anna apple during 5 <sup>th</sup> to 16 <sup>th</sup> week after full bloom.	45
14	Showing the average qualities after harvest of Anna apple.	46

Table

Page

- 15      Showing the average sensory score of Anna  
apple harvested at 13, 14, 15 and 16 weeks  
after full bloom.

47

### LIST OF FIGURES

Figure		Page
1	The schematic of a single sigmoid growth curve of fruit	5
2	The schematic of a double sigmoid growth curve of fruit	6
3	Increase in mean weights and volume of fruits which time	8
4	Increase of fruit-weight during development of varieties of apple	9
5	Increase in volume of fruit of Early Harvest, McIntosh and Rome apple from full bloom to fruit ripening (water displacement method).	10
6	Increase in transverse diameters of entire fruits, pith and core or outer boundary of pericarp of Early Harvest, McIntosh, Twenty Ounce, and Rome apple from full bloom to fruit ripening.	11
7	Days from full bloom to harvest maturity of apples.	21
8	Showing the starch-iodine scores for Granny Smith apples.	27

# XIII

Figure		Page
9	Increase in fresh weight (gm) of fruit of Anna apple.	35
10	Increase in width (cm) of fruit of Anna apple.	36
11	Increase in length (cm) of fruit of Anna apple	37
12	Increase in volume (cm <sup>3</sup> ) of fruit of Anna apple.	38
13	Specific gravity change of fruit of Anna apple.	39
14	Decrease in fruit firmness (pound) of Anna apple.	40
15	Changing in percentage of sugar content in fruit of Anna apple.	41
16	Changing in percentage of malic acid content in fruit of Anna apple.	42
17	Changing in sugar and acid ratio (TSS/TA ratio) of fruit of Anna apple.	43
18	Changing in vitamin C content (mg/100 gm flesh) in fruit of Anna apple.	44

Figure		Page
19	Chlorophyll content (mg/gm peel) changes in the peel of Anna apple.	45
20	Showing the flowers of Anna apple that were tagged on 19 Feb. 1986.	48
21	Showing the fruits of Anna apple that were wrapped at 9 <sup>th</sup> week after full bloom.	49
22-26	Showing the stage of fruit growth of Anna apple.	50-54
27-32	Showing the starch-iodine test of Anna apple during 5 <sup>th</sup> to 16 <sup>th</sup> week after full bloom.	55-60
