LIST OF FIGURES	xiii
ABBREVIATIONS	xviii
INTRODUCTION	
1. General aspects of asthma	1
2. Airway hyperresponsiveness and inflammatory mediators	4
3. Reference drugs used in this study	11
4. Experimental models used for investigation of bronchodilators	14
5. Purpose of the study	16
MATERIALS AND METHODS	
A. Experiments <u>in vitro</u>	
1. Isolated guinea-pig tracheal chain preparation	19
2. Isolated rat tracheal strip preparation	23
B. Experiments <u>in vivo</u>	
1. Histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs	26

	PAGE
2. Methacholine-induced bronchoconstriction in pentobarbital anesthetized rats	29
3. Hippocratic screening test	30
C. List of drugs and solvents	33
D. Statistical analysis	34
RESULTS	
A. Experiments <u>in vitro</u>	
1. Effect of phenylalkane derivatives and reference drugs in isolated guinea-pig tracheal chain preparation	35
1.1 Screening for potential bronchodilator activity of phenylalkane derivatives	35
1.2 Comparison of the dose-response relationship of PA-3 with reference drugs	41
1.3 Comparison of the antagonistic effect of PA-3 and reference drugs on histamine-induced tracheal contraction in the presence of beta-adrenergic antagonist	46
2. Effect of PA-3 and reference drugs in isolated rat tracheal strip preparation	47
2.1 Effect of PA-3 and reference drugs	47
2.2 Comparison of the dose-response relationship of PA-3 with reference drugs	55

B. Experiments <u>in vivo</u>	
1. Effect of PA-3 and reference drugs on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	57
2. Effect of PA-3 and reference drugs on the cumulative doses of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	69
3. Hippocratic screening test	85

LIST OF TABLES

TABLE	PAGE
1. Pathologic changes in asthma and the mediators that may be responsible.	2
2. Mediators involve in pathogenesis of asthma.	3
3. Chemical structures of phenylalkane derivatives.	17
4. Effect of phenylalkane derivatives (PAs) on histamine-induced contraction of isolated guinea-pig tracheal chain.	38
5. Effect of isoproterenol, papaverine, compound D, verapamil and aminophylline on histamine-induced contraction of isolated guinea-pig tracheal chain.	44
6. Effect of PA-3 and reference drugs (atropine, papaverine, verapamil and aminophylline) as well as compound D on methacholine-induced contraction of isolated rat tracheal strip.	53
7. Effect of PA-3 on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	60
8. Effect of reference drugs (isoproterenol, verapamil, papaverine and aminophylline) on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pig.	62

TABLE	PAGE
9. Effect of the cumulative doses of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	72
10. Effect of the first set of cumulative methacholine-induced bronchoconstriction in various groups of anesthetized rats used for testing the activity of PA-3.	75
11. Effect of PA-3 on the second set of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	77
12. Effect of isoproterenol on the second set of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	80
13. Effect of papaverine on the second set of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	84
14. Effect of verapamil on the second set of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	87
15. Effect of aminophylline on the second set of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	90
16. Effect of PA-1 given intraperitoneally in conscious rats recorded 1 hr after drug administration.	95

LIST OF FIGURES

FIGURE	PAGE
1. Concept of the pathogenesis of asthma.	10
2. Chemical structure of compound D.	16
3. Experimental set for recording of tracheal contraction using isolated guinea-pig tracheal chain.	20
4. Experimental set for recording of tracheal contraction using isolated rat tracheal strip.	25
5. Experimental model for recording of intratracheal pressure in pentobarbital anesthetized guinea-pig or rat.	27
6. Standardized work sheet for Hippocratic screening test.	32
7. Effect of phenylalkane derivatives, PA-1, PA-2, PA-3, PA-4 and PA-5 on histamine-induced contraction of the isolated guinea-pig tracheal chain.	36
8. Comparison of the dose-response relationship of phenylalkane derivatives on the histamine-induced contraction of isolated guinea-pig tracheal chain.	39
9. Effect of isoproterenol, papaverine, compound D, verapamil and aminophylline on histamine-induced contraction of isolated guinea-pig tracheal chain.	42

FIGURE	PAGE
10. Comparison of dose-response relationship of PA-3 and reference drugs on the histamine-induced contraction of isolated guinea-pig tracheal chain.	45
11. Antagonistic activity of PA-3, isoproterenol, verapamil, papaverine and aminophylline on histamine-induced tracheal contraction in the presence of propranolol (β -adrenergic antagonist).	48
12. Effect of atropine, papaverine, verapamil, aminophylline, compound D and PA-3 on methacholine-induced contraction of isolated rat tracheal strip.	50
13. Comparison of the dose-response relationship of PA-3 and reference drugs on the methacholine-induced tracheal contraction of isolated rat tracheal strip.	56
14. A. Increase in intratracheal pressure in response to the first and the second doses of histamine in pentobarbital anesthetized guinea-pigs.	58
B. Blocking effect of chlorpheniramine on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	
15. Effect of PA-3 on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	59

FIGURE		PAGE
16	Effect of isoproterenol on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	63
17.	Effect of verapamil on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	64
18.	Effect of papaverine on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	65
19.	Effect of aminophylline on histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs.	66
20.	Comparison of the dose-response relationship of PA-3 and reference drugs on the histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs in terms of PIPR.	67
21.	Comparison of the dose-response relationship of PA-3 and reference drugs on the histamine-induced bronchoconstriction in pentobarbital anesthetized guinea-pigs in terms of RA.	68
22.	A. Increase in intratracheal pressure in response to the first and the second cumulative doses of methacholine in pentobarbital anesthetized rats. B. Blocking effect of atropine on the second cumulative doses of methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	71

FIGURE	PAGE
23. Dose-related bronchoconstriction caused by methacholine (intravenously) in pentobarbital anesthetized rats.	73
24. Effect of PA-3 on dose-related methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	78
25. Effect of PA-3 on methacholine-induced bronchoconstriction in pentobarbital anesthetized rats, assessed in terms of PIPR and RA.	79
26. Effect of isoproterenol on the dose-related methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	81
27. Effect of isoproterenol on methacholine-induced bronchoconstriction in pentobarbital anesthetized rats, assessed in terms of PIPR and RA.	82
28. Effect of papaverine on the dose-related methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	85
29. Effect of papaverine on the methacholine-induced bronchoconstriction in pentobarbital anesthetized rats, assessed in terms of PIPR and RA.	86
30. Effect of verapamil on the dose-related methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	88

FIGURE	PAGE
31. Effect of verapamil on methacholine-induced bronchoconstriction in pentobarbital anesthetized rats, assessed in terms of PIPR and RA.	89
32. Effect of aminophylline on the dose-related methacholine-induced bronchoconstriction in pentobarbital anesthetized rats.	91
33. Effect of aminophylline on methacholine-induced bronchoconstriction in pentobarbital-anesthetized rats, assessed in terms of PIPR and RA.	92

ABBREVIATIONS

PA _s	=	phenylalkane derivatives
cAMP	=	cyclic adenosine 3', 5'-monophosphate
SRS-A	=	slow reacting substance of anaphylaxis
IgE	=	immunoglobulin E
NSS	=	normal saline solution
CNS	=	central nervous system
cm	=	centimetres
g	=	grams
ml	=	millilitres
mm	=	millimetres
min	=	minutes
hr	=	hours
