ACKNOWLEDGEMENTS	iii
ABSTRACT	iv
LIST OF FIGURES	xiii
LIST OF TABLES	xvi
ABBREVIATIONS	xviii
CHAPTER I INTRODUCTION	1
I.1 The structure of human hemoglobin	2
I.2 Recent methodologic advances in the study of genes and their structure	3
I.3 The human globin gene structure	8
I.4 The genetic mechanism	9
I.5 The alpha thalassemia	12
I.5.1 The deletional types	
I.5.2 The nondeletional types	
CHAPTER II MATERIALS AND METHODS	22
II.1 Procedure for detection of deletional types in alpha-thalassemia	
II.2 Procedure for detection of hemoglobin Constant Spring	24
II.3 METHOD	25
II.3.1 Collection of sample	
II.3.2 Isolation of DNA	

	PAGE
II.3.3 Restriction endonuclease enzyme digestion	27
II.3.4 Gel electrophoresis	28
II.3.5 Southern blotting	29
II.3.6 Preparation of probe	31
II.3.6.1. Alpha ₂ probe	
II.3.6.2. Zeta probe	33
II.3.6.3. Lo probe	
II.3.6.4. Hb CS oligonucleotide probe	
II.3.7 Isolation and purification of probe	37
II.3.7.1 Amplification of plasmid DNA	
II.3.7.2 Isolation of plasmid DNA	
II.3.7.3 Purification of plasmid DNA	38
II.3.7.4 Isolation of DNA specific probe	40
II.3.7.5 Purification of oligonucleotide probe	42
II.3.8 Radiolabelling	44
II.3.8.1 DNA specific probe labelling	
II.3.8.2 Oligonucleotide probe labelling	46
II.3.9 Hybridization	47
II.3.9.1 DNA specific probe hybridization	
II.3.9.2 Oligonucleotide probe hybridization	
II.3.10 Washing	48
II.3.10.1 DNA specific probe	
II.3.10.2 Oligonucleotide probe	

	PAGE
II.3.11 Autoradiography	49
CHAPTER III RESULT	51
III.1 Isolation of DNA	
III.2 Restriction endonuclease enzyme digestion	
III.3 Southern blotting	
III.4 Preparation of probe	
III.4.1 DNA specific probe	
III.4.2 Oligonucleotide probe	
III.5 Hybridization	55
III.6 Autoradiography	
CHAPTER IV DISCUSSION	83
CHAPTER V CONCLUSION	97
REFERENCES	98
APPENDIX	104
VITA	110

LIST OF FIGURES

FIGURE	PAGE
I.1 The blotting hybridization technique for the demonstration of deletional alpha-thalassemia detection.	6
I.2 The oligonucleotide hybridization technique for the demonstration of Hb CS detection.	7
I.3 The general pattern of organization of the human globin genes.	10
I.4 Diagram of globin chain synthesis.	11
I.5 Deletional mapping of the human alpha globin gene cluster.	14
I.6 Details of the alpha globin duplication unit, showing the highly conserved X,Y and Z homology blocks.	11
I.7 The alpha ₁ and alpha ₂ globin genes in the positions assumed during a misaligned crossover.	16
I.8 Detailed comparison of the alpha ₁ and alpha ₂ genes beyond the 7 bp insert in alpha ₁ globin gene.	17
II.1 Cross section of a Southern blot apparatus.	30
II.2 The recombinant plasmid containing of the Alpha ₂ probe.	32
II.3 The recombinant plasmid containing of the Zeta probe.	34
II.4 The recombinant plasmid containing of the Lo probe.	35
II.5 Detailed comparison of alpha ₁ and alpha ₂ gene at the termination codon.	36

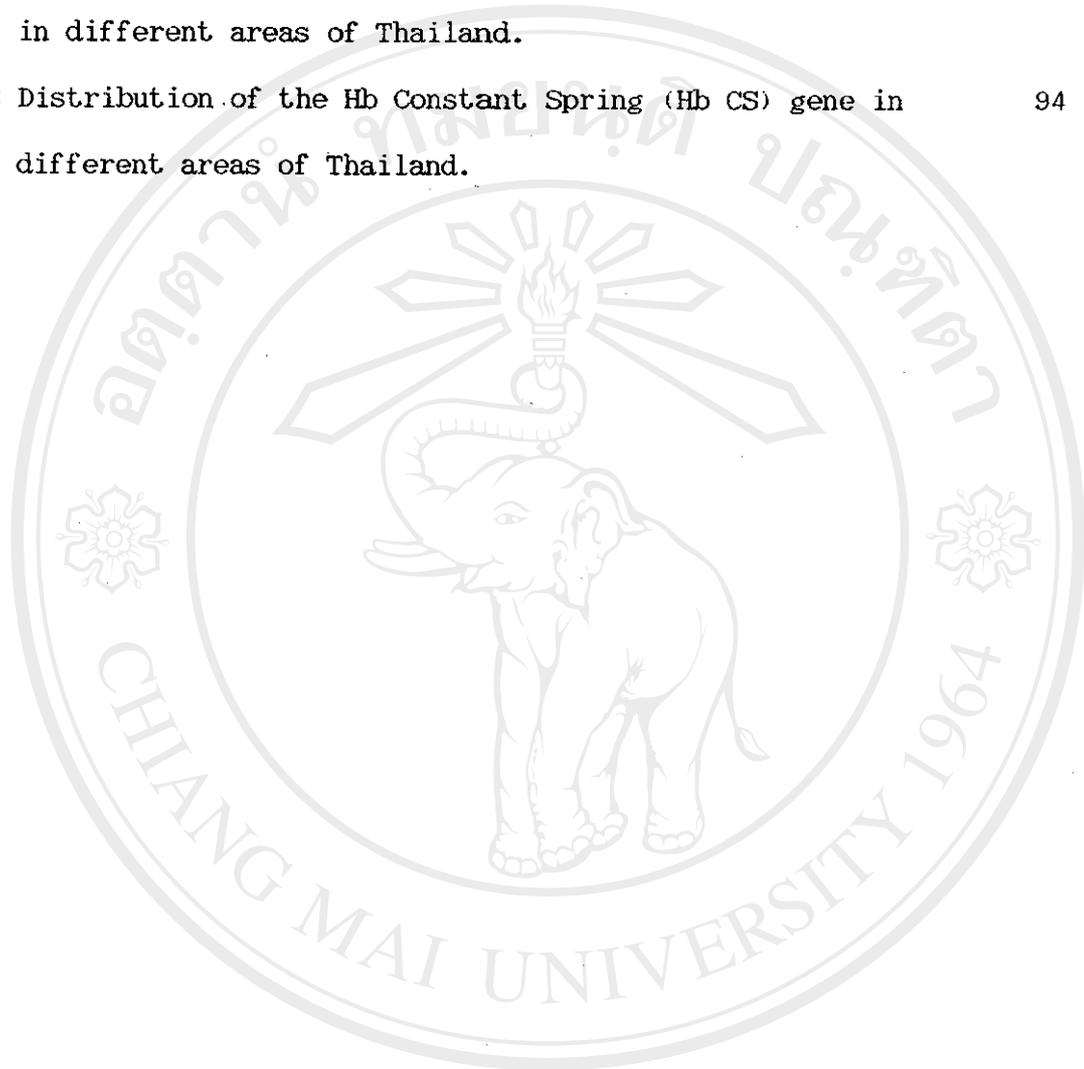

FIGURE	PAGE
II.6 Diagram showing the purification of the plasmid DNA by centrifugation to equilibrium in cesium chloride-ethidium bromide gradients.	39
II.7 The electroelution technique for the demonstration of DNA specific probe purification.	41
II.8 Cross section of polyacrylamide gel electrophoresis for the demonstration of oligonucleotide probe purification.	43
II.9 The multiprimer DNA labelling systems for the demonstration of DNA specific probe labelling.	45
II.10 Gel drying machine.	50
III.1 The smear pattern of restriction endonuclease enzyme digested DNA.	52
III.2 Agarose gel electrophoresis for the demonstration of DNA specific probe isolation.	53
III.3 Schematic of deletional alpha-thalassemia detection.	56
III.4 Alpha-thalassemia : deletional types, demonstration of Bam HI and Bgl II restriction sites.	58
III.5 Autoradiograph showing the alpha-thal-2 detection.	59
III.6 Autoradiograph showing the alpha-thal-1 detection.	60
III.7 Autoradiograph from subtyping of the rightward alpha-thal-2 in comparison with the normal samples.	62
III.8 Hind III enzyme mapping around the human alpha globin gene cluster.	63

FIGURE	PAGE
III.9 Details of Rsa I restriction sites on the alpha globin gene cluster.	65
III.10 Autoradiograph showing the Rsa I polymorphic site detection.	66
III.11 Autoradiograph showing the Hb CS detection.	67
III.12 Autoradiograph showing the RFLP of the mutant sample (MT1) in comparison with the normal sample, the rightward and the leftward alpha-thal-2 samples.	75

LIST OF TABLES

TABLE	PAGE
I.1 Alpha-thalasseмииs represent in order of increasing severity.	12
I.2 Alpha-thalassaemia mutants.	20
III.1 The RFLP of DNA samples when hybridization the Bam HI digested DNA with the α_2 and the zeta probe.	69
III.2 The RFLP of 33 alpha-thal-2 samples when digestion with Bgl II, Rsa I or Apa I and hybridization with α_2 probe.	74
III.3 The RFLP of alpha-thal-1 when hybridization the consecutive Bam HI/Bgl II digested DNA with zeta probe.	77
III.4 The RFLP of the undifferentiated DNA when digestion with Rsa I and hybridization with α_2 probe.	78
III.5 The RFLP of four Hb CS samples when hybridization the Rsa I digested DNA with α_2 and oligonucleotide probes.	79
III.6 The prevalence of the alpha globin haplotypes in the total population sample.	80
III.7 The prevalence of the alpha globin genotypes.	81
III.8 Linkage of the Rsa I polymorphism and the alpha globin haplotypes.	82
IV.1 The RFLP of the MT1 sample in comparison with the normal and the rightward alpha-thal-2 (R+) haplotype.	89

TABLE	PAGE
1V.2 The prevalence of deletional alpha-thal-2 and alpha-thal-1 in different areas of Thailand.	91
IV.3 Distribution of the Hb Constant Spring (Hb CS) gene in different areas of Thailand.	94

ABBREVIATION

bp	= basepair
°C	= degree Celcius
CsCl	= cesium chloride
DNA	= deoxyribonucleic acid
EDTA	= ethylenediamine tetraacetic acid
Hb	= hemoglobin
HOAc	= acetic acid
hr	= hour
kb	= kilobase
M	= molar
mCi	= millicurie
mRNA	= messenger ribonucleic acid
ml	= millilitre
mM	= millimolar
min	= minute
MgCl ₂	= magnesium chloride
NaCl	= sodium chloride
Na ₂ HPO ₄	= disodiummonohydrogenphosphate
NaH ₂ PO ₄	= monosodiumdihydrogenphosphate
NaOAc	= sodiumacetate
nm	= nanometre
O.D.	= optical density
rpm	= revolution per minute

SDS	= sodiumdodecylsulfate
SSC	= sodium chloride - sodiumcitrate
STE	= sodium chloride - Tris-HCl - EDTA
TE	= Tris-HCl - EDTA
Tris-HCl	= Tris (hydroxymethyl) aminomethane
ug	= microgram
ul	= microlitre
um	= micrometre
