ACKNOWLEDGEMENTS

The author would like to express his heartfelt thanks and sincere appreciation to the Deutsche Gesellschaft für Technische Zusammenarbeit (GTZ) for awarding him a scholarship to undertake the M.S. Programme in Environmental Risk Assessment for Tropical Ecosystems (ERA).

The author wishes to give his sincere thanks and appreciation to Dr. Mongkon Rayanakorn and Dr. Joachim Krüger for their excellent supervision, invaluable guidance and constant encouragement throughout the course of this work even during the preparation of this thesis.

The author's sincere thanks go to all of the academic staff of the ERA Programme for their kindness in transferring their knowledge and experience in this particular field to him. His appreciation is extended to Mr. Chaohua Feng, Ms. Wanaruk Saipunkaew, Ms. Somporn Chantara, and Ms. Jaruwat Viriyahirunpiboon for their useful help and invaluable suggestion and all of his ERA friends for their encouragement while pursuing this research project.

To Mr. Pisan Sae-eng and all of the technical staff of the Department of Chemistry of Chiang Mai University, the author is very much indebted for their contribution concerning the provision of high-standard research facilities.

Finally, the author would like to give his most special thanks to his father and mother for their unending love, continual encouragement and moral support.

Chumni Sangphagdee
