ACKNOWLEDGMENT	i
ABSTRACT	iii
THAI ABSTRACT	v
TABLE OF CONTENTS	vii
LIST OF TABLES	x
LIST OF FIGURES	xiii
CHAPTER 1 INTRODUCTION	1
CHAPTER 2 LITERATURE REVIEW	4
2.1 Definition and Measurement of Rice Grain Quality	4
2.2 Importance of Rice Grain Quality	5
2.3 Factors Affecting on Rice Quality	9
2.4 Role of Phosphorous and Zinc Supply in Plant Growth and Grain Quality	12
CHAPTER 3 MATERIALS AND METHODS	20
3.1 Informal Survey	20
3.2 Determination of Important Rice Quality Characteristics	21
3.3 Field Experiment	24
3.4 Data Analysis	27
CHAPTER 4 RESULTS	
4.1 Survey	28
4.1.1 Rice production systems in Yunnan	28
4.1.2 Farmers' concerns in rice production	34
4.1.3 Rice experts and farmers' opinions on rice quality in relation to genotypes and environment	35
4.1.4 Rice consumption and consumers' preference	36
4.1.5 Relationship between market price and rice quality	38
4.2 Determination of Important Rice Quality Characteristics	40
4.2.1 General descriptions and statistics of original variable data	40

♦ Grain quality of samples	41
♦ Correlation analysis	48
♦ Principal component analysis	49
♦ Market price variation	51
4.2.2 The Estimation of Implicit Price Model	54
4.3 Field Experiment	59
4.3.1 Environmental conditions	59
4.3.2 Crop phenology	59
4.3.3 Grain yield	60
4.3.4 Yield components	62
♦ Panicle weight	62
♦ Percentage of filled grains	63
♦ Thousand grain weight	63
♦ Productive tillers per plant	64
♦ Total grains per panicle	64
4.3.5 Agronomic characteristics	64
♦ Total biomass	64
♦ Harvest index	65
♦ Plant height	65
4.3.6 Zn distribution	66
♦ Stem	66
♦ Leaf	67
♦ Grain	68
♦ Total Zn uptake per hectare	70
♦ Total Zn distribution in different plant parts	71
4.3.7 P distribution	73
♦ Stem	73
♦ Leaf	73
♦ Grain	74
♦ Total P uptake per hectare	75
♦ Total P distribution in different plant parts	75
4.3.8 Grain physicochemical characteristics	78
♦ Grain physical characteristics	77
♦ Grain biochemical characteristics	79
4.3.9 Correlation among various characteristics	82

CHAPTER 5 DISCUSSION	84
5.1 Rice Consumption and Production in Yunnan	84
5.2 Economic and Agronomic Considerations for Rice Quality Characteristics and Market Prices	85
5.3 Effects of P and Zn Application on Rice Grain Quality	89
CHAPTER 6 CONCLUSION	99
REFERENCES	103
APPENDIX	
Appendix A Raw Data on Characteristics of Sixty Milled Rice Samples Collected from Domestic Market, Yunnan, 1994	110
Appendix B Layout of Field Experiment Diagram of Size of Per Experimental Unit and Spacing of Plant	111
Appendix C Summary of Field Experimental Results	112
Appendix D Analysis of Variance (ANOVA) of Field Experiment	121
Appendix E Summary of Agronomic and Quality Characteristics of Three Rice Varieties	127
CURRICULUM VITAE	128

LIST OF TABLES

Table	Page
2.1 The NY 122-88 Chinese Agricultural Ministry criteria for high quality rice (abstracted from Xiong Z.-M. et al. 1992)	5
2.2 Regression estimates of implicit prices for grain characteristics in southeast Asian countries (Unnevehr L.J. et al., 1985)	7
2.3 NY 122-88 Chinese Agricultural Ministry standardization of national grading systems for rice quality evaluation (Xiong Z.M. et al. 1992)	9
2.4 Effects of variety, environment, and processing on rice grain qualities (Unnevehr L.J. et al., 1993)	10
2.5 Examples of direct and indirect roles of mineral nutrients in photosynthesis (Marschner H. 1986)	12
2.6 The effect of P fertilizer supply on grain quality of wheat grain (Afudaoning H.C. 1992)	15
2.7 Effect of Zn supplies as Zn-EDTA to a Zn-deficient calcareous soil on tranptophan contents of rice grains (Marschner H. 1986)	16
2.8 Effects of Zn application on growth, yield and Zn concentration of rice plant growing on a calcareous soil, Philippines (Adapted from Yoshida S. 1975)	17
2.9 Effects of P and Zn application on the total amount of plant uptake P and Zn in rice (Modified from Yang X. et al., 1986)	18
2.10 Effects of P and Zn application on vegetative and reproductive growth of rice (Abstract. Yang X. et al., 1986)	19
4.1 Annual planting area and production output of rice in Yunnan, 1969-1990 (Yang S.-X. 1992)	31
4.2 Predominantly grown rice cultivars and its area (10,000 ha) in rice production of Yunnan, 1979-1992 (Jian Z.-N. 1993)	33
4.3 Milled rice samples classifications in three sites	40
4.4 Average characteristics of rice samples at the locations, Yunnan, 1994	43
4.5 Average characteristics of the different genotypes of milled rice samples, Yunnan, 1994	44

4.6	Average characteristics of waxy and non-waxy milled rice samples, Yunnan, 1994	44
4.7	Descriptive statistics for characteristics of milled rice samples (n=60), Yunnan, 1994	45
4.8	Descriptive statistics for Zn content of milled rice samples	45
4.9	Descriptive statistics analysis for protein content of milled rice samples	45
4.10	Quality characteristics of rice varieties with high price (>3.50 yuan/kg) Yunnan, 1994	46
4.11	Amylose scattergram of milled rice samples of varieties grown in various regions in Yunnan, 1994	47
4.12	Quality characteristics of rice variety under different biophysical conditions in Yunnan	47
4.13	Correlation matrix (PERASON) of characteristics of milled rice (n=60)	48
4.14	Principal component matrix with variable loading of physicochemical characteristics of milled rice samples (n=60), Yunnan, 1994	50
4.15	Rice price classification at three location, Yunnan, 1994	53
4.16	Rice prices at three locations, Yunnan, 1994	53
4.17	Rice prices of different rice genotypes, Yunnan, 1994	53
4.18	One way analysis variance (AOV) for price and LSD pairwise comparisons of mean of price by location	54
4.19	One way analysis variance (AOV) for price and LSD pairwise comparisons of mean of price by genotype	54
4.20	Regression estimates of implicit prices for rice quality characteristics at three locations in Yunnan, 1994	56
4.21	Regression estimates of implicit prices for rice quality characteristics of different types of milled rice in Yunnan, 1994	58
4.22	Summary of analysis of variance (ANOVA) of crop phenology	60
4.23	Summary of analysis variance (ANOVA) of grain yield and yield components	62
4.24	Summary of analysis of variance (ANOVA) of agronomic characteristics	65
4.25	Summary of analysis of variance (ANOVA) of Zn content in stem, leaf, grain, and total dry matter	66
4.26	Effects of Zn and P application on Zn content (mg/kg) of leaf blade with three rice varieties	68

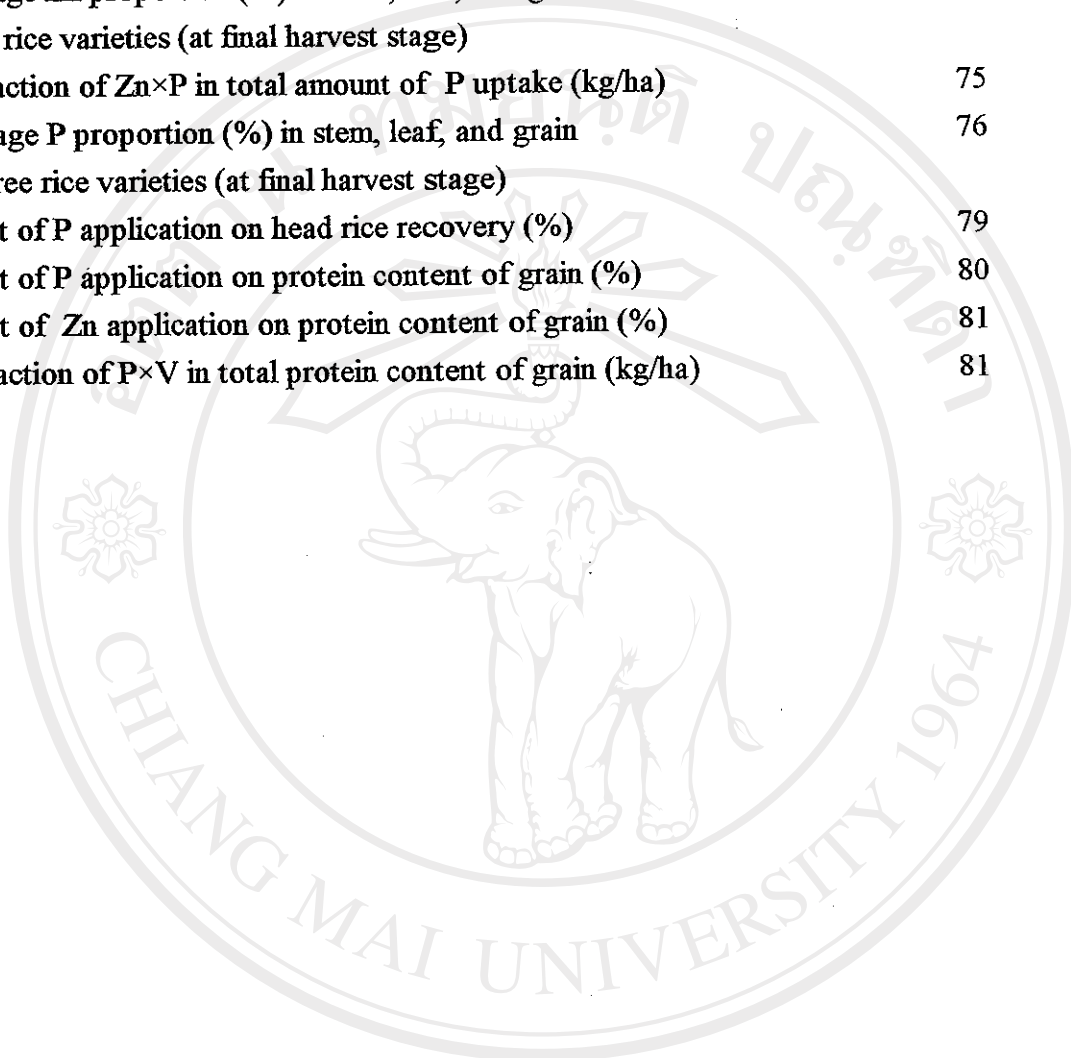

4.27	Summary of analysis of variance (ANOVA) of Zn proportion (%) in stem, leaf, and grain	72
4.28	Summary of analysis of variance (ANOVA) of P content in stem, leaf, grain, and total dry matter	73
4.29	Effects of Zn and P application on P content (%) in leaf with three rice varieties	74
4.30	Summary of analysis of variance (ANOVA) of P proportion (%) in stem, leaf, and grain	76
4.31	Summary of analysis of variance (ANOVA) of physical quality characteristics of grain	77
4.32	Average physical quality characteristics of rice grain with three rice varieties	78
4.33	Summary of analysis of variance (ANOVA) of chemical quality characteristics of grain	80
4.34	Correlation matrix of characteristics of rice with two varieties (n=36)	83

LIST OF FIGURES

Figure	Page
2.1 Schematic diagram of extended rice characteristics and consumers traits affecting the price of rice (extended hedonic model) (Abansi C. et al. 1993)	8
3.1 Yunnan map	22
4.1 Classification of rice cropping regions in Yunnan	29
4.2 Rice production system in Yunnan	30
4.3 Per capita rice consumption of urban people, Yunnan, 1989-1994	37
4.4 Market price of rice in Yunnan, 1960-1994	38
4.5 Milled rice samples available in market and the sample classifications	41
4.6 Nutritional quality (Zn content of grain mg/kg) of different rice genotypes	42
4.7 Nutritional quality (protein content of grain %) of different rice genotypes	42
4.8 Scheme illustrating the effect of principal components on variables	50
4.9 Classification of market price of rice in Yunnan, 1994	51
4.10 Rice price variation in three locations, Yunnan, 1994	52
4.11 Rice price variation among three types of rice genotypes, Yunnan, 1994	52
4.12 Effects of P application (without Zn applied) on grain yield of three rice varieties	61
4.13 Effects of P (with Zn applied) on grain yield of three rice varieties	61
4.14 Interaction of P×V in panicle weight (g/plant)	63
4.15 Interaction of Zn×P in Zn content of stem (mg/kg)	67
4.16 Interaction of Zn×P in Zn content of grain (mg/kg)	68
4.17 Effects of P and Zn application on total amount of Zn content (g/ha) of grain in Hexi 35	69

4.18	Effects of P and Zn application on total amount of Zn content (g/ha) of grain in Yungeng 34.	70
4.19	Interaction of Zn×V in total amount of Zn uptake (g/ha)	71
4.20	Average Zn proportion (%) in stem, leaf, and grain of three rice varieties (at final harvest stage)	72
4.21	Interaction of Zn×P in total amount of P uptake (kg/ha)	75
4.22	Average P proportion (%) in stem, leaf, and grain of three rice varieties (at final harvest stage)	76
4.23	Effect of P application on head rice recovery (%)	79
4.24	Effect of P application on protein content of grain (%)	80
4.25	Effect of Zn application on protein content of grain (%)	81
4.26	Interaction of P×V in total protein content of grain (kg/ha)	81
