ACKNOWLEDGMENT

The author would like to express his sincere thanks and appreciation to his supervisor, Dr. Tippawan Prapamontol, for her kind and great overall supervision, to co-supervisor, Dr. Prasak Thavornytikarn, Dr. Ookeaw Prakobvitayakit of the Faculty of Sciences, Chiang Mai University, and Professor Dr. Peter Nagel of the University of Saarland, Federal Republic of Germany, for their useful advice and grateful help.

The author would also express his sincere thanks to the Germany Government via the Deutsche Gesellschaft fuer Technische Zusammenarbeit (GTZ) for the financial support covering the tuition, living and thesis allowance, and so on, and to all the academic staff of the International Program in Environmental Risk Assessment for their precious knowledge, and to all the classmates, seniors, juniors from different countries for their friendly companionship.

Special thanks are given to Dr. Sodsai Tovanabutra, Miss Tasanai Vongchak, Mrs. Posri Leelapat, Miss Jeerang Wongtrakul, Miss Wanraya Verayutwattana, Mr. Songchai Woranuj, and all the staff in Biochemistry division and other divisions in the Research Institute for Health Sciences, Chiang Mai University, for their huge support during the whole thesis research period. Special thanks also owe to my partners Mr. Anuchit Chingchuangchai and Mr. Winyoo Rungadulpisal from Department of Engineering for their harmony cooperation during the process of air quality monitoring using high volume air sampler.

I also wish to thank all the people who ever encourage, help me in the past two years in Thailand.

Finally, my wife and my family deserve the deeply gratitude of mine for their encouragement and selfless support.

Zhigang Kang
