ACKNOWLEDGEMENT

I would like to express my deep appreciation and sincere gratitude to my major advisor Assistant Professor, Dr. Prakin Suchaxaya for her valuable supervision, encouragement, and support throughout this study. I would also like to express my appreciation to my co-advisor, Associate Professor Wilawan Picheansathian for her encouragement, thoughtful guidance, and careful attention to all aspects of the study.

I would also like to thank my home university advisors, Professor Shao Weiwei and Professor Su Zuyou for their thoughtful guidance, support and encouragement during the research process.

I am also grateful to those who have offered constructive criticism and valuable suggestions to the research and the people who help me to validate the data collection instruments both at Chiang Mai University and Xian Medical University.

I am grateful for the cooperation of all staff nurses who participated in this study. Without these people, this study would not have been possible and successfully completed.

Further thanks is also extended to the directors, supervisors, and head nurses of nursing service in the first and second teaching hospitals of Xian Medical University and Xijing and Tangdu hospitals of the Fourth Military Medical University for their assistance in the data collection

IV

process.

A very special thanks is extended to the investigator's parents, brothers, husband and son for their understanding and encouragement throughout the period of the study.

Further thanks is also extended to Chiang Mai University and Xian Medical University for providing me with the opportunity for the study. A sincere thanks is also extended to the China Medical Board of New York for supporting the POHNED and providing the financial support for my study.
