ACKNOWLEDGMENTS

The author would like to thank many people and institutions who have helped her in the completion of this thesis research.

First and foremost, the author wishes to thank her academic advisor and chairperson of thesis examine committee Dr. Rojarae Nopakoonwong, for her invaluable advice, encouragement and patience throughout all stages. The author also indebted for her enormous effort to make correction and revision of this thesis manuscript. The author would like to express profound gratitude to Assoc. Prof. Dr. Benjavan Rerkasem, for her guidance, stimulating suggestions, encouragement and genuine support in many ways during the author's study at Chiang Mai University. Sincere thank goes to other members of thesis examine committee, Assoc. Prof. Dr. Danai Boonyakiat and Assoc. Prof. Dr. Tavatchai Radanachaless for their constructive comments and generous advice.

The author is thankful to Ajarn Phrek Gypmantisiri, Chairman of Agricultural Systems (AGS) Program, for his kind help in solving problem during her study in this program. Thanks also go to all officers and staff of AGS Program, Chiang Mai University, for providing various form of assistance and help during her study, especially Ms. Waraluck Suteerawantana and Mr. Sithichai.

Thanks also owe to her fellow students in AGS Program for their genuine help and friendship throughout her study. Those especially worth to mention here are: Budsara, Sayan, Shyam, Hau, Karma, Tinh, Feri, Tanya, Pattana and her Chinese friends Chen, Fan, Li, Huang, Xuan and Zhang.

The author would like to acknowledge all her directors and colleagues at Yunnan Agricultural University (YAU), China. Especially, encouragement and significant contribution of Prof. Chen Hairu, Li Benxun, Sheng Jiaxiang, Bao Zuoran and Liang Mingqing is gratefully acknowledged.

Many thanks to Kunming Da Baiqiao Horticultural Farm provided for providing experimental field. In this regard, the author is grateful to her friend Song Ximing for his cooperation in implementation and management of the field experiment. Support from the staff of Yunnan Soil and Fertilizer Testing Center (YSFTC) and Agricultural Products Quality Supervisor Station (APQSS) to carry out laboratory analysis, which is crucial for the success of this research, is specially mentioned here.

Sincere thanks are due also to Ford Foundation for granting the author scholarship to study at AGS Program of Chiang Mai University in Thailand, include this thesis research cost, which enabled author to gain both knowledge and experience.

The author is grateful for valuable comments and suggestions from Dr. R.W. Bell, Murdoch University, Western Australia.

Finally, special gratitude belongs to the author's parents (Dong Jiade and Meng Duairong) sisters (Dong Qinhua and Meng hua) and brothers (Dong Geyang and Dong Run), whose inspiration, understanding, patience and sacrifices are crucial for her success.
