ACKNOWLEDGEMENTS

I would like to express my heartfelt gratitude and appreciation to my supervisor and co-supervisor, Dr Robert Molloy and Dr. Nipapan Molloy, for their kind supervision, valuable guidance and constant inspiration throughout the course of this research.

My thanks are also due to Mr. Kanarat Na Lampang for the synthesis and characterisation of the poly(L-lactic acid-co- ϵ -caprolactone) samples which were studied in this project.

I also thank Dr. Narin Sirikulrut of the Department of Physics for his help in microscopy, Dr. Nitat Jira-arun of the Department of Industrial Chemistry and Dr. Taweechai Amornsakchai of the Department of Chemistry, Mahidol University for their useful suggestions concerning the tensile testing, and Dr. Jintana Siripitayananon for her general guidance and valuable discussions.

I also wish to express my sincere gratitude to the National Science and Technology Development Agency (NSTDA) for the honour of being awarded a Graduate Study Scholarship and the Chemistry Department, Faculty of Science, Chiang Mai University, and its staff members for the provision of laboratory facilities and maintenance services which made this study possible.

Last, and most of all, I am indebted to my family for their tender love and to everybody in the Biomedical Polymers Research Unit for their endless encouragement which has enabled me to achieve success in my higher education.
