ACKNOWLEDGMENT

I still believe that “POVERTY IS NOT A HINDRANCE TO SUCCESS”. Thus, with my determination and perseverance to pursue a higher degree was still materialized inspite of pessimism and despair. Yet, there is still the ALMIGHTY that guided and lightens my path towards a better way of fulfilling my long-timed wish of developing my profession. Of course, there are always people and organizations behind this success and without them these could not had been materialized.

Generally, my heartfelt thanks is gratefully extended to the Faculty and Staff of Faculty of Science, Chiang Mai University, Thailand and Universitat des Saarlandes, Federal Republic of Germany, specifically the ERA Program (special thanks to Ach. Prasak- Chairman) and the Department of Technical and Economic Cooperation (DTEC), Thailand for their technical assistance and financial support respectively. Their unfailing and continued support to the program in an efficient way had made it easier for me to achieve the goals. I was very happy that these organizations and people behind the realization of this humble work were always generous and kind to extend their help at any time I am in need of their services.

At the outset, I am very grateful for the never-ending support of my Advisory Committee (Dr. Arayar Jatisatienr-Chairman and Members: Dr. Surasak Watanesk,

Mr. William George Prewett and Dr. Joachin Kubiniok). Their technical assistance and constructive criticisms had scientifically improved my work inspite of a very limited time.

Specifically, my greatest gratitude to Ach. Arayar Jatisatiern(My Adviser) for extending all the necessary assistance since the very start of this endeavor especially in the collection of soil samples (special thanks to Wut and Khun Suthaat), access of facilities at the Biology Department (e.g. computers, laboratory facilities, transportation etc.) as well as in the GIS part of my research. Likewise, I am very thankful also with the technical assistance of Ach. Bill in the AAS laboratory at the Department of Geological Sciences (special thanks to Khun Adul and Khun Mayuree) and Achn. Kubi for the soil texture analysis and the GIS-IDRISI Program. Their selfless dedication of extending their assistance had encouraged me more to achieve this work.

Furthermore, my life in CMU could have been so boring without sharing it with my very active and jolly peers: ERA Batch 1995 (Nanette, Lita, Anh, Manasa, Kafle, Monyrak, Guruge, Siripon, Mrs. Wang and Mr. Luo). Our two years of struggle and sharing of experiences has made our studies a very fruitful, memorable and enjoyable one. Likewise, thank you for the continued guidance of our jolly Ach. Schafer who was always open-handed to share his technical expertise and experiences.

The two years was just too short in Thailand. Nevertheless, it was still enjoyable especially with the warm welcome of my Filipino friends in Chiang Mai especially by Bert and Marina Tambungui & Family, Ate Vicky and Kuya Moy Nimanhaemminda & Family , Lita, Nanette, Boying and Glenn. The sharing of their time, resources and fun made me feel at home even though I am in a foreign land.

Above all, this humble work is dedicated to my parents (Inay Doing, Tatay Roman) and my brothers and sisters (Mana Gloria & Family, Mana Lucita & Family, Mano Pol, Mana Terry, Mano Arturo & Family, and Mana Rosa and Family) and relatives in Villareal. A very special thank to Dr. Paciencia P. Milan for her unfailing encouragement and help. Their understanding, love and prayers had motivated me more to achieve a higher degree. For me, my determination to succeed was very meaningful because of them.

To reiterate, I would like to thank God for all the graces He bestowed on me and to one and all who in one way or another contributed something to this endeavor.

"Your thoughts and kindness shall always remain in my heart forever."
