LIST OF TABLES

Table	Page
1 Age distribution of the normal and open bite groups	12
2 Means, standard deviations and standard errors of the cephalometric measurements in the normal and open bite samples (sex combined)	33
3 Two-way Analysis of Variance for the main effects of sex, type of occlusion (normal and open bite) and the interaction effect	34
4 Multiple comparisons for means of UPDH/UADH ratio in two types of occlusion of both sexes by Scheffe test	40
5 Multiple comparisons for means of Sn-Stm ₅ in two types of occlusion of both sexes by Scheffe test	40
6 The comparisons of the cephalometric measurements between the normal Northern Thai males and females	42
7 The comparisons of the cephalometric measurements between the open bite Northern Thai males and females	43
8 Means, standard deviations, one-way ANOVA and Scheffe test of skeletal Class I, Class II and Class III in the open bite group	48
9 Correlations between 27 dentofacial measurements in the normal subjects.	50
10 Correlations between 27 dentofacial measurements in the open bite subjects.	55
11 The predictor variables for the anterior open bite	59
12 The skeletal and dental relationships of Northern Thai, Thai, and Caucasian adults with normal occlusion	62

Table	Page
13 The facial heights and dentoalveolar heights of Northern Thai, Thai, Chinese and Caucasian adults with normal occlusion	64
14 The skeletal, dental and soft tissue characteristics of three dental anterior open bite samples	71
15 The comparisons of the first and second measurements between the intrainvestigators	90
16 The comparisons of the first and second measurements between the interinvestigators	91

LIST OF ILLUSTRATIONS

Figure	Page
1 Skeletal, dental and soft tissue landmarks	19
2 Skeletal and dental angular measurements	22
3 Skeletal and dental linear measurements	24
4 (A) Overbite measurement using the functional occlusal plane as a reference plane. (B) A negative incisal overbite is defined as an open bite	27
5 Soft tissue vertical linear measurements	29
