

## OBJECTIVES

The objectives of the studies were:

1. To determine the amount of Cefoxitin and Ceftazidime base in 1000 mg intramuscular dosage form of the respective innovator and generic preparations.
2. To conduct the bioequivalent testing of intramuscular preparations of Cefxitin® and Cef-4® against Cefoxin® and Fortum®, respectively.
3. To determine the pharmacokinetic parameters of intramuscular Cefoxitin and Ceftazidime.
