ACKNOWLEDGEMENTS

I would like to express my heartfelt gratitude and appreciation to Dr. Robert Molloy, my supervisor, Dr. Nipapan Molloy and Dr. Tiwaporn Siriwittayakorn, for their kind supervision, invaluable guidance and constant inspiration throughout the course of this research project.

I am also grateful to Ms. Kanok-orn Pothinan of the Faculty of Agro-Industry for her guidance and useful suggestions concerning the mechanical testing and Mr. Thanet Kleawkla for typing this thesis. I also gratefully acknowledge the generous support of the National Metal and Materials Technology Center (MTEC) which enabled me to present some of the work described in this thesis at the 23rd Annual Congress on Science and Technology of Thailand held in Chiang Mai from 20-22 October 1997 (see APPENDIX).

I also wish to express my sincere gratitude to the National Science and Technology Development Agency (NSTDA) for the honour of being awarded a Graduate Student Study Scholarship and to the Department of Chemistry, Faculty of Science, Chiang Mai University, for the provision of laboratory facilities which made this study possible. Thanks are also due to all my friends in the Biomedical Polymers Research Unit for their help and understanding.

Last, and most of all, I am indebted to my parents for their tender love and steadfast encouragement which has enabled me to achieve success in my postgraduate education.

Achara Jongautchariyakul
