CHAPTER 1	
INTRODUCTION	
1.1 Flow Injection Analysis (FIA)	1
1.1.1 Principle of FIA	3
1.1.2 FIA Instrumentation	5
1.1.3 Dispersion of Sample and Reagent Zones	8
1.2 Aluminium	10
1.2.1 Occurrence of Aluminium	10
1.2.2 Application of Aluminium	11
1.2.3 Hazard Evaluation and Limiting Concentration	11
1.2.4 Determination of Aluminium	11

	Page
1.3 Europium	13
1.3.1 Occurrence of Europium	13
1.3.2 Application of Europium	14
1.3.3 Determination of Europium	14
1.4 Research Aims	16

CHAPTER 2

DETERMINATION OF ALUMINIUM(III) WITH TETRACYCLINE AS A COMPLEXING AGENT

2.1 Introduction	17
2.2 Experimental	18
2.2.1 Apparatus and Instruments	18
2.2.2 Chemicals	18
2.2.3 Preparation of Standard Solutions and Reagents	19
2.3 Theory	20
2.4 Preliminary Studies of Spectrometric Determination of Aluminium(III) by Using TC as a Complexing Agent	21
2.4.1 Absorption Spectra	21
2.4.2 Composition of the Aluminium(III) - TC Complex	22
2.5 Optimization of the Flow System	24
2.5.1 Optimum Wavelength	24
2.5.2 Effect of pH	26

	Page
2.5.3 Effect of TC Concentration	28
2.5.4 Effect of Flow Rate	30
2.5.5 Effect of the Inner Diameter of Mixing Tubing	33
2.5.6 Effect of the Length of Mixing Tubing	36
2.5.7 Effect of the Size of Coiled Mixing Part	39
2.5.8 Effect of the Length of s.b.s.r.	41
2.5.9 Effect of Various Shapes of Mixing Part	43
2.5.10 Effect of the Reagent Injection Volume	47
2.6 Study of the Analytical Parameters for Aluminium(III)	49
Determination	
2.6.1 Linear Range	49
2.6.2 Precision	51
2.6.2.1 Precision of the Flow Injection System	51
2.6.2.2 Precision of the Proposed Method	52
2.6.3 Detection Limit	53
2.6.4 Calibration Curve and Sensitivity	54
2.6.5 Effect of foreign ions	56
2.6.6 Accuracy	59
2.7 Application of the proposed FIA method	60
2.7.1 Determination of aluminium(III) in tap water samples using TC	60
2.7.2 Determination of tetracycline in drug formulations by using single standard calibration curve	62

CHAPTER 3**DETERMINATION OF EUROPIUM(III) WITH
CHLORTETRACYCLINE AS A COMPLEXING AGENT**

3.1	Introduction	65
3.2	Experimental	66
3.2.1	Apparatus and Instruments	66
3.2.2	Chemicals	66
3.2.3	Preparation of Standard Solutions and Reagents	67
3.2.4	Manifold and Procedure	67
3.3	Results and Discussion	69
3.3.1	Preliminary Studies of the Complex	69
3.3.1.1	Absorption Spectra of CTC and Eu(III)-CTC Complex	69
3.3.1.2	Composition of the Eu(III)-CTC Complex	70
3.3.2	Optimization of the Flow System	71
3.3.2.1	Effect of Various Wavelengths on Peak Height	71
3.3.2.2	Effect of pH	74
3.3.2.3	Effect of CTC Concentration	75
3.3.2.4	Effect of Flow Rate	76
3.3.2.5	Effect of Inner Diameter of Mixing Tubing	78
3.3.2.6	Effect of Mixing Tubing Length	79
3.3.2.7	Effect of Using a Glass Bead Column as a Mixing Reactor	80

	Page
3.3.2.8 Effect of Various Mixing Reactor Types	82
3.3.2.9 Effect of Injection Volume	83
3.3.3 Analytical Characteristics of the Proposed Method	85
3.3.3.1 Linearity	85
3.3.3.2 Precision	87
3.3.3.3 Detection Limit	89
3.3.3.4 Calibration Curve and Sensitivity	90
3.3.3.5 Accuracy	92
3.3.3.6 Interferences	92
3.4 Determination of Europium(III) in Spiked Water Samples	95
CHAPTER 4	
DISCUSSION AND CONCLUSIONS	
4.1 Discussion	96
4.1.1 Determination of aluminium(III) with TC	97
4.1.2 Determination of europium(III) with CTC	102
4.2 Conclusions	106
REFERENCES	107
APPENDIX	112
VITA	113

LIST OF TABLES

Table	Page
1.1 Process FI applications	2
1.2 Options for a FI manifold	6
1.3 A brief review of aluminium determination	12
2.1 Absorbance of various mole ratio of Al(III) and TC solutions	23
2.2 Experimental conditions for studying optimum wavelength of Al(III) - TC complex	24
2.3 Peak heights at various wavelengths	25
2.4 Effect of the pH of tris-buffer solution on peak heights	26
2.5 Effect of the TC and Al(III) concentration on peak heights	28
2.6 Experimental conditions for the study of the pump flow rate on peak heights	30
2.7 Effect of the pump flow rate on peak height	31
2.8 Analytical characteristics for the determination of standard aluminium(III) solution 0.50 ppm at various pump flow rate	31
2.9 Effect of the I.D. of mixing tubing on peak heights	34
2.10 Analytical characteristics for the determination of standard aluminium(III) solution 0.50 ppm	34
2.11 Effect of the length of mixing tubing on peak heights	37
2.12 Analytical characteristics for the determination of standard aluminium(III) solution 0.50 ppm	38
2.13 Effect of the O.D. of test tube of coiled mixing part on peak heights	40
2.14 Effect of the length of s.b.s.r. on peak heights	41

Table	Page
2.15 Analytical characteristics for the determination of Al(III) standard solution 0.50 ppm at various length of s.b.s.r. mixing part	42
2.16 Effect of various shapes of mixing part on peak heights	44
2.17 Analytical characteristics for the determination of standard aluminium(III) solution 0.50 ppm at various shapes of mixing parts	45
2.18 Effect of the reagent injection volume on peak heights	47
2.19 Experimental conditions for the study of linear range of the determination of Al(III)	49
2.20 Study of linear range	50
2.21 Study of the precision of the flow injection system	51
2.22 Study of the precision of the proposed method	52
2.23 Peak height obtained for blank solutions	53
2.24 Peak heights of various Al(III) concentrations near the detection limit	54
2.25 Peak heights for calibration curve	55
2.26 Effect of interfering ions	57
2.27 Peak height obtained by using standard addition FIA	59
2.28 Assessment of the accuracy of the proposed method	60
2.29 Determination of Al(III) in tap water using the proposed procedure and comparison with standard method	61
2.30 Peak height (mV) for 0.0-10.0 ppm TC (100 μ l) by single standard method	62
2.31 Analysis of some proprietary drugs by using single standard calibration curve	64

Table	Page
3.1 The absorbance of Eu(III) - CTC complexes	71
3.2 The fixed analytical parameters by random for europium(III) determination with CTC at varying wavelengths (380-440 nm)	72
3.3 Effect of operating wavelength on peak height	73
3.4 Effect of pH on peak height	74
3.5 Effect of CTC concentration on peak heights	75
3.6 Effect of carrier flow rate on peak height	77
3.7 Effect of the inner diameters of mixing tubing on peak height	78
3.8 Effect of mixing tubing length on peak height	79
3.9 Effect of glass bead column length on peak height	81
3.10 Effect of mixing reactors on peak height	82
3.11 Effect of the injection volume on peak height	84
3.12 Analytical characteristics for europium(III) determination with CTC	85
3.13 Relationship between peak height and various concentrations of europium(III)	86
3.14 Replicate determination of europium(III) solution (1.0 ppm)	87
3.15 Replicate determination of 1.0 ppm of europium(III)	88
3.16 Peak height obtained for 12 replicates blank solution	89
3.17 Peak height obtained for low concentration europium(III) solution	90
3.18 Peak height of various concentrations of europium(III)	90
3.19 Peak height obtained by using standard addition method	92
3.20 Relationship between peak heights and amounts of interfering species	93

Table	Page
3.21 Determination of europium(III) at different concentrations in spiked water samples using the proposed procedure	95
4.1 Analytical characteristics for trace aluminium(III) determination with TC	100
4.2 Analytical characteristics for europium(III) determination with CTC	105

LIST OF FIGURES

Figure	Page
1.1 Stages of development and classification of automated solution analysis	1
1.2 Comparison between FIA and segmented continuous analysis	3
1.3 Single-line FIA manifold showing the various components	4
1.4 An originally homogeneous sample zone	9
2.1 Structure of Tetracycline Hydrochloride	17
2.2 Manifold for the determination of Al(III) by rFIA	20
2.3 reversed FIA system for the determination of Al(III) with tetracycline as a complexing reagent	21
2.4 Absorption spectrum of Al(III) -TC complex and TC solution	22
2.5 Mole - ratio plots for a 1:3 Al(III)-TC complex	23
2.6 Peak height at various wavelengths	25
2.7 Absorption spectra of Al(III) - TC complex at various pH	27
2.8 Effect of pH on peak height at wavelength 390 nm	27
2.9 Effect of TC concentration on peak heights	29
2.10 Relationship between slope (mV/ppm) and TC concentration (M)	29
2.11 Effect of the pump flow rate	32
2.12 Relationship between slope (mV/ppm) and pump flow rate (ml/min)	32
2.13 Relationship between t_{base} (sec) and pump flow rate (ml/min)	33
2.14 Effect of the I.D. of mixing tubing on peak heights	35
2.15 Relationship between slope (mV/ppm) and I.D. of mixing tubing (in)	35
2.16 Relationship between t_{base} (sec) and I.D. of mixing tubing (in)	36

Figure	Page
2.17 Effect of the length of mixing tubing on the calibration curve	37
2.18 Relationship between slope (mV/ppm) and length of mixing tubing (m)	38
2.19 Relationship between t_{base} (sec) and length of mixing tubing (m)	39
2.20 Relationship between slope (mV/ppm) and size of coiled mixing part	41
2.21 Relationship between slope (mV/ppm) and length of s.b.s.r. (cm)	43
2.22 Relationship between t_{base} (sec) and length of s.b.s.r. (cm)	43
2.23 Effect of various shapes of mixing parts on peak height	45
2.24 Relationship between slope (mV/ppm) and various shapes of mixing part	46
2.25 Relationship between t_{base} (sec) and various shapes of mixing part	46
2.26 Effect of the reagent injection volume on peak height of Al(III) solution	48
2.27 Relationship between slope (mV/ppm) and reagent injection volume (μl)	48
2.28 Relationship between net signal (mV) and various concentrations of Al(III) (ppm)	50
2.29 Calibration signals for the determination of Al(III) with TC as a complexing agent	55
2.30 The calibration curve for determining Al(III)	56
2.31 Single standard calibration curve for determination of TC in proprietary drugs	63
2.32 FI signal for various concentrations of TC obtained by using single standard method	63

Figure	Page
3.1 Chemical structure of CTC	65
3.2 FIA manifold for Eu(III) determination with CTC	68
3.3 FIA system for Eu(III) determination with CTC	68
3.4 Absorption spectra of CTC and Eu(III)-CTC complex	69
3.5 Determination of the composition of Eu(III)-CTC complex by continuous variations and mole ratio method	70
3.6 Relationship between peak height (mV) from 100 ng Eu(III) with various wavelengths	73
3.7 Relationship between slope (mV/ppm) and pH of tris - buffer	74
3.8 Relationship between slope (mV/ppm) and CTC concentration (M)	76
3.9 Relationship between slope (mV/ppm) and carrier flow rate (ml/min)	77
3.10 Relationship between slope (mV/ppm) and mixing tubing length (cm)	80
3.11 Relationship between slope (mV/ppm) and s.b.s.r. length (cm)	81
3.12 Relationship between slope (mV/ppm) and reactor types	83
3.13 Relationship between slope (mV/ppm) and injection volume (μ l)	84
3.14 The calibration curve for europium(III) determination	86
3.15 FIA signals for 0 - 0.60 ppm of europium(III)	91
3.16 The calibration curve for europium(III) determination with CTC	91

ABBREVIATIONS

A.R.	analytical reagent
AAS	atomic absorption spectrophotometry
°C	degree Celsius
cm	centimeter
CTC	chlortetracycline
D	detector
FIA	flow injection analysis
g	gram
hr	hour
I.D.	inner diameter
in	inch
l	liter
min	minute
ml	milliliter
mV	millivolt
M	molar
n	number of measurement
nm	nanometer
no.	number
O.D.	outer diameter
ppb	part per billion
ppm	part per million
rFIA	reversed flow injection analysis

sec	second
s.b.s.r.	single bead string reactor
S.D.	standard deviation
TC	tetracycline
μg	microgram
UV	ultraviolet
λ	wavelength
\bar{x}	arithmatic mean
