ACKNOWLEDGEMENT

I would like to express my deepest gratitude to my advisor, Associate Professor Rujapa Nimsung, for her invaluable guidance, continuous discussion and encouragement throughout this thesis. Her kindness and sincerity will be remembered forever.

I also extend my gratitude and appreciation to Assistant Professor Dr. Audomsark Haesungcharern, my co-advisor, for his invaluable suggestion and advice.

I am indebted to Assistant Professor Dr. Prachya Kongtawelert, Department of Biochemistry, Faculty of Medicine, Chiang Mai University, for the gift of reagents in the total sialic acid assay.

In addition, I would like to thank all the members and staff of the Division of Clinical Chemistry Laboratory and all the members of Blood Bank Section, Maharaj Nakorn Chiang Mai Hospital for the specimen collection. Special thanks are also extended to Khun Praijitr Tanan.

I am also indebted to Ajarn Mongkol Chotayaporn and Ajarn Khajornsak Tragoolpua, Faculty of Associated Medical Sciences, Chiang Mai University and I am very thankful to Khun Somchai Khongkasub and Khun Niweas Intharos, the staff of the Medical Record and Hospital Statistic Section, Maharaj Nakorn Chiang Mai Hospital and all staff members of the Department of Clinical Chemistry, Faculty of Associated Medical Sciences, Chiang Mai University for the helps they have given to me.

Finally, I would like to express my special appreciation to the board of directors of Saraburi Hospital, Saraburi for their permission to study for this degree.
