CHAPTER 1		
INTRODUCTION		
1.1	Pesticides	1
	1.1.1 Toxicological Properties	2
	1.1.2 Formulations	3
1.2	Organophosphorus Insecticides	6
	1.2.1 Mode of Action of Organophosphorus Insecticides	9
1.3	Methyl Parathion	10
	1.3.1 Identity, Properties, and Uses	10
	1.3.1.1 Chemical Name	10
	1.3.1.2 Structure	10
	1.3.1.3 Synonyms	11
	1.3.1.4 Chemical and Physical Properties	11
	1.3.1.5 Formulations, Uses, and Production	11
	1.3.2 Toxicity	11
	1.3.3 Determination of Methyl Parathion	12

1.4 Flow Injection Analysis 14

1.4.1 Historical Perspectives 14

1.4.2 Basic Principles of FIA 17

1.4.3 Dispersion of Sample Zone 19

1.5 General Instrumentation of FIA 22

1.5.1 Liquid Delivery Units (Pump) 23

1.5.2 Injection Valves 25

1.5.3 Mixing Reactors 27

1.5.4 Detectors 29

1.5.4.1 Spectrophotometers 29

1.6 Research Aims 30

CHAPTER 2

OPTIMEZATION OF FLOW INJECTION SPECTROPHOTOMETRY FOR METHYL PARATHION DETERMINATION

2.1 Introduction 31

2.2 Experimental 32

2.2.1 Apparatus and Instruments 32

2.2.2 Chemicals 33

2.2.3 Preparation of Standard Solutions and Reagents 33

2.3 Preliminary Studies of Absorption Spectrum of Methyl Parathion Using Alkaline Hydroxylamine 34

2.3.1 Absorption Spectrum by Conventional Method 34

2.3.2 Absorption Spectrum by FIA-Spectrophotometric Method 35

2.4	Optimization of the Flow Injection (FI) System	37
	2.4.1 Wavelength	37
	2.4.2 Effect of Sodium Hydroxide (NaOH) Concentrations	38
	2.4.3 Effect of Hydroxylamine (H_3NOHCl) Concentrations	39
	2.4.4 Effect of Temperature	40
	2.4.5 Effect of Flow Rates	41
	2.4.6 Effect of Inner Diameter of Mixing Tubing R1	43
	2.4.7 Effect of the Length of Mixing Tubing R1	44
	2.4.8 Effect of the Size of Coiled Mixing Part R1	45
	2.4.9 Effect of Inner Diameter of Mixing Tubing R2	46
	2.4.10 Effect of the Length of Mixing Tubing R2	47
	2.4.11 Effect of the Size of Coiled Mixing Part	48
	2.4.12 Effect of Glass Bead Column as a Mixing Reactor R1	49
	2.4.13 Effect of Glass Bead Column as a Mixing Reactor R2	50
	2.4.14 Effect of Various Shapes of Mixing Part R1 and R2	51
	2.4.15 Effect of Injection Volume	52
2.5	Analytical Characteristics of the Method	53
	2.5.1 Linear Range	53
	2.5.2 Reproducibility of the Flow Injection System	55
	2.5.3 Detection Limit	55
	2.5.4 Calibration Curve	57
	2.5.5 Effect of Interferences	58

CHAPTER 3

DETERMINATION OF METHYL PARATHION IN PLANT MATERIALS AND COMMERCIAL FORMULATIONS

3.1 Introduction 61

3.2 Experimental 62

3.2.1 Apparatus and Instruments 62

3.2.2 Chemicals 62

3.3 Sample Preparation 63

3.4 Analysis of Methyl Parathion in Vegetable Samples and Commercial Formulations 64

3.4.1 FIA Method 64

3.4.2 Spectrophotometric Method 65

3.4.3 Polarographic method 70

3.4.4 Comparison of the Proposed FIA Method with Spectrophotometric and Polarographic Methods 76

CHAPTER 4

DISCUSSION AND CONCLUSIONS

4.1 Influence of Reaction Variables 79

4.2 Analytical Parameters 83

4.3 Interference Studies 83

4.4 Analysis of Methyl Parathion in Plant Materials and Commercial Formulations 84

4.5 Conclusions 85

LIST OF TABLES

Table		Page
1.1	Toxicities of chemicals based on the LD_{50} values	2
1.2	Quantities of imported pesticide formulation in 1984	6
1.3	Classification of organophosphorus Insecticides	7
1.4	Water Solubilities of some organophosphorus insecticides	8
1.5	A brief review of methyl parathion determination	14
2.1	Experimental condition for methyl parathion determination	36
2.2	Peak height at various wavelengths	36
2.3	Effect of NaOH concentration on peak height	38
2.4	Effect of hydroxylamine concentration of peak height	39
2.5	Effect of temperature on peak height	40
2.6	Effect of pump flow rate on peak height	41
2.7	Effect of the inner diameter of mixing tubing on peak height	43
2.8	Effect of the length of mixing tubing on peak height	44
2.9	Effect of the size of coiled mixing part on peak height	45
2.10	Effect of the inner diameter of mixing tubing R2 on peak height	46
2.11	Effect of the length of mixing tubing R2 on peak height	47
2.12	Effect of the size of coiled mixing part R2 on peak height	48
2.13	Effect of the length of s.b.s.r. R1 on peak height	49
2.14	Effect of the length of s.b.s.r. R2 on peak height	50
2.15	Effect of various shapes of mixing part R1 and R2 on peak height	51
2.16	Effect of injection volume on peak height	52
2.17	Analytical characteristics for methyl parathion determination	53

Table		Page
2.18	Study of linear range	54
2.19	Reproducibility of replicated determination of methyl parathion	55
2.20	Peak height obtained for blank solutions	56
2.21	Peak heights obtained from low concentrated methyl parathion determination	56
2.22	Peak height for calibration curve	57
2.23	Effect of interferences	58
3.1	Application of the FIA method for the determination of methyl parathion in various vegetable samples	63
3.2	Application of the FIA method for the determination of methyl parathion in different commercial formulations	65
3.3	Absorbance for calibration curve	66
3.4	Application of the spectrophotometric method for the determination of methyl parathion in various vegetable samples	68
3.5	Application of the spectrophotometric method for the determination of methyl parathion in different commercial formulations	70
3.6	Variation of peak intensity of various concentrations of methyl parathion	71
3.7	Application of the polarographic method for the determination of methyl parathion in various vegetable samples	74
3.8	Application of the polarographic method for the determination of methyl parathion in different commercial formulations	76

Table		Page
3.9	Comparison of the proposed FIA method with Spectrophotometric and polarographic methods for Determination of methyl parathion in vegetable samples	77
3.10	Comparison of the proposed FIA method with spectrophotometric and polarographic methods for determination of methyl parathion in commercial formulations	78
4.1	Analytical characteristics for methyl parathion determination with alkaline hydroxylamine	85

LIST OF FIGURES

Figure		Page
1.1	The normal enzymic hydrolysis of acetylcholine to choline	9
1.2	Stage of development and classification of automated solution analysis	15
1.3	The parallel between manual and automated operations that have to be performed in the course of a typical colorimetric assay	16
1.4	The basic components of an FIA system	18
1.5	Typical detector output of an FIA system into which a dye solution is repeatedly injected	19
1.6	Dispersed sample zone in flow system	20
1.7	Relationship between the rollers of a peristaltic pump and the pump tube	24
1.8	Syringe injector	26
1.9	Rotary injection valve	27
1.10	The microreactor geometries most frequently used in FIA	28
1.11	A spectrophotometric flow-cell	30
2.1	Schematic diagram of the flow system used for methyl parathion determination	31
2.2	FIA system for methyl parathion determination	32
2.3	Absorption spectrum of 4-nitrophenol against reagent blank solution	35
2.4	Peak height at various wavelengths	37

Figure		Page
2.5	Relationship between slope (mV/ppm) and NaOH concentration (M)	38
2.6	Relationship between slope (mV/ppm) and H_3NOHCl concentration (M)	39
2.7	Relationship between slope (mV/ppm) and temperature(°C)	40
2.8	Relationship between slope (mV/ppm) and pump flow rate (ml/min)	42
2.9	Relationship between sampling rate (samples/hr) and pump flow rate	42
2.10	Relationship between slope (mV/ppm) and I.D. of mixing tubing (in)	43
2.11	Relationship between slope (mV/ppm) and length of mixing tubing (cm)	44
2.12	Relationship between slope (mV/ppm) and size of coiled mixing part	45
2.13	Relationship between slope (mV/ppm) and I.D. of mixing tubing R2 (in)	46
2.14	Relationship between slope (mV/ppm) and length of mixing tubing R2	47
2.15	Relationship between slope (mV/ppm) and size of coiled mixing part R2	48
2.16	Relationship between slope (mV/ppm) and length of s.b.s.r. R1 (cm)	49
2.17	Relationship between slope (mV/ppm) and length of s.b.s.r. R2 (cm)	50

Figure		Page
2.18	Relationship between slope (mV/ppm) and various shape of mixing part	51
2.19	Relationship between slope (mV/ppm) and injection volume (μl)	53
2.20	Relationship between net signal (mV) and various concentration of methyl parathion (ppm)	54
2.21	Calibration signal output of methyl parathion determination	57
2.22	The calibration curve of the FIA method for methyl parathion determination	58
3.1	Absorption spectra of various concentrations of azo dye against a reagent blank	67
3.2	The calibration curve of the spectrophotometric method for methyl parathion determination	67
3.3	Standard addition curve for methyl parathion determination in Cabbage, Lettuce, Chinese kale, and Cowpea, using spectrophotometric method.	69
3.4	Polarogram of various concentration of methyl parathion	72
3.5	Calibration curve of polarographic method for methyl parathion determination	73
3.6	Standard addition curve for methyl parathion determination in Cabbage, Lettuce, Chinese kale, and Cowpea, using polarographic method.	75
4.1	Normal absorption of the hydrolysis process of methyl parathion into 4-nitrophenol	79
4.2	The hydrolysis reaction of methyl parathion to liberate 4-nitrophenol	80
