ACKNOWLEDGMENT

This research could not have been successfully completed without the assistance of many people.

First, I would like to express my deep thanks and sincere appreciation to my major thesis advisor, Assistant Professor Thiphaphorn Tungamnuay for her guidance, encouragement, and support. An equal thank is given to my co-advisor Assistant Professor Dr. Khanokporn Sucamvang for her encouragement, thoughtful guidance, and careful attention to all aspects of the study.

I would also like to thank my home university advisors, Professor Shao Weiwei and Professor Liu Miao for their thoughtful guidance, support and encouragement during the research process.

I am also grateful to those who have offered constructive criticism and valuable suggestions to the research and the people who help me to validate the data collection instruments both at Chiang Mai University and Xi'an Medical University.

I am grateful for the cooperation of all patients who participated in this study. Without them, this study would not have been possible and successfully completed.

Further thanks is also extended to the directors, supervisors, and head nurses of nursing service in the First Teaching Hospital of Xi'an Medical University for their

IV

assistance in the data collection process.

A very special thanks is extended to the investigator's parents, sister for their understanding and encouragement throughout the period of the study.

Further thanks is also extended to Chiang Mai University in Thailand and Xi'an Medical University in China for providing me with the opportunity for the study. A sincere thanks is also extended to the China Medical Board of New York, Inc. for supporting the POHNED and providing financial support for my study.
