ACKNOWLEDGEMENTS

I would like to express my gratitude and sincere thanks to Assistant Professor Wimon Tanasuwan, my major thesis advisor, and Assistant Professor Dr. Seepan Kantawang, my co-advisor, for their guidance, support, encouragement and help. Without them, I would never have accomplished my goal. My special appreciation is extended to Assistant Professor Dr. Ratanawadee Chontawan, academic advisor of this study, who always shared her valuable experience with me and gave me understanding and suggestions. Meanwhile, special acknowledgement of the guidance and help of Professor Su Zuyou, my Chinese advisor, is given.

I would like to extend my appreciation to Yu Yanqiu, the Dean of Faculty of Nursing, China Medical University, and Wang Hongjuan, the Director of the Department of Nursing, the Second Teaching Hospital of China Medical University, for their encouragement and support. Further thanks is extended to Chiang Mai University and Xi'an Medical University for providing me with the opportunity for the study.

My recognition is extended to experts from Chiang Mai University and China Medical University for their help in validating the content of the instrument for data collection. I also would like to thank all people who supported me through this study, including my dear

colleagues, Heads, Staff of First, Second Teaching Hospital of China Medical University and Shenyang General Military Hospital. Further thanks to all children who participated in this study for their cooperation. May they all be healthy and have good futures.

Finally, I wish to express my sincere appreciation to my parents for their support, encouragement, love and belief in me. A very special thanks is extended to my husband, Mr. Na Xiaofan, for his constant love, understanding, support and encouragement.

Fan Ling
