ACKNOWLEDGEMENT

I wish to express my sincere gratitude and deep appreciation to the supervisory committee and all staffs of the Department of Pharmacology for their instructions and supports throughout my graduate study.

A sincere gratefulness to Assoc. Prof. Dr. Chaichan Sangdee, the chairman of the supervisory committee for my thesis work, for his valuable guidance on the research plan, comments, suggestions and thesis writing.

My deep appreciation is for Assoc. Prof. Dr. Amphawan Apisariyakul for her help on the thesis writing.

I am indebt to General Chawal Kanchanakul, the volunteer acupuncturist of Dhamanamai Foundation, who first taught me the art of treatment with electroacupuncture. He shared with me his deep knowledge and skills as well as his unique, less invasive, but effective needling so-called "Chawal's technic".

I am grateful to Prof. Dr. Pongsiri Prathanadee, the chairman of Dhamanamai Foundation, for offering me an opportunity to attend a training course on acupuncture in Yunan College of Traditional Chinese Medicine, the Poeple Republic of China.

A special gratefulness is also extended to Mr. Subhachai Jayasvasti for inventing electroacupuncture stimulators; Dr. Nantawit Sugandhavesa, Dr. Kanit Sananpanich and Dr. Siripong Chiewchantanakit for giving orthopedist's overall opinion of change from treatment; Asst. Prof. Dr. Maleeya Manorot and Asst. Prof. Dr. Noppamas Rojanasthien for assessment of adverse events; Asst. Prof. Dr. Suwalee Pojchamarnwiputh for reports on radiographic findings of knees; Asst. Prof. Dr. Prachya Kongtawelert and his colleagues for providing the methods used in quantitative measurement of cartilage markers in human serum, and Ms. Kittika Kanchanarattanakorn for valuable guidance on data analysis.

I would like to acknowledge Mr. Boonyium Kumsorn, Mr. Kongkaew Pichakan and my sister, Ms. Pongthong Teekachunhatean, for being my acupuncturist assistants and for their excellent taking care of my patients throughout the study.

I would also like to express my sincere thanks to all patients enrolled in this research work and to Faculty of Medicine, Chiang Mai University for financial support of this project.

Finally, I am deeply indebted to all members of my family, especially my wife and my son, Mudang and Xiao Mao. Without their loves, understanding and constant encouragement, this thesis would not be possible.
