

TABLE OF CONTENTS

Title	Page
Acknowledgements	iii
Abstract (English)	iv
Abstract (Thai)	vi
List of Tables	xiii
List of Illustrations	xiv
Abbreviations	xvii
 Chapter 1 Introduction	
1.1) Lipases	1
1.1.1) Lipases	1
1.1.2) Screening for lipase activity	3
1.1.3) Catalytic mechanism	5
1.1.4) Application of lipases	7
1.2) Recombinant DNA technology	18
1.2.1) Plasmid cloning vectors	19
1.2.2) Transformation and selection	20
1.2.3) Polymerase chain reaction (PCR)	21
1.2.4) Mutagenesis	22
1.3) Protein purification	24
1.4) Literature reviews	25
1.5) Purpose of the study	32

Title	Page
Chapter 2 Materials and methods	
2.1) Materials	33
2.1.1) Chemicals	33
2.1.2) Primers	34
2.1.3) Equipments	35
2.1.4) Microorganisms	37
2.2) Cultivation	37
2.2.1) Cultivation of cloned lipase P1 in <i>E. coli</i> DH5 α	37
2.2.2) Extraction of cloned lipase	38
2.3) Molecular cloning	38
2.3.1) Extraction of plasmid DNA	38
2.3.2) PCR clean up	41
2.3.3) Polymerase chain reaction (PCR) amplification	42
2.3.4) Digestion DNA with restriction enzymes	42
2.3.5) Ligation	43
2.3.6) Transformation of competent <i>E. coli</i> M15[pREP4] and JM109	43
2.3.7) Checking the inserted DNA	45
2.3.8) Agarose gel electrophoresis	46
2.3.9) Expression of a recombinant protein	47
2.4) Structural modeling	48
2.4.1) Secondary structure prediction and hydrophobicity profile	48
2.4.2) Homology modeling and computer graphic study of the lipase structure	49
2.4.3) Site-directed mutagenesis	50
2.5) Purification	52
2.5.1) Ammonium sulphate precipitation	52
2.5.2) Ultrafiltration	53
2.5.3) Dialysis	53

Title	Page
2.5.4) Strong anion exchange chromatography	55
2.5.5) Gel filtration chromatography	56
2.5.6) SDS-PAGE	58
2.5.7) Western blotting	61
2.6) Lipase assay	62
2.7) Protein determination	64
2.8) Characterization of the recombinant lipase	64
2.8.1) Effect of pH on the lipase activity and stability	64
2.8.2) Effect of temperature on the lipase activity and stability	65
2.8.3) Substrate specificity	65
2.8.4) Kinetic study of lipase	66
2.8.5) Positional specificity	66
2.8.6) Effect of metal ions on lipase activity	67
2.8.7) Effect of inhibitors on the lipase activity	67
2.8.8) Effect of detergents on lipase stability	68
2.8.9) Effect of organic solvents on the lipase stability	68
2.8.10) Crystallization	69
2.9) Chiral separation of lipase	70
Chapter 3 Results	
3.1) Cloning of the lipase gene	72
3.1.1) Determination of the nucleotide sequence of the lipase P1	72
3.1.2) Digestion with restriction enzymes	72
3.1.3) Ligation, transformation and screening of recombinant lipase	74
3.1.4) Nucleotide sequence and NH ₂ -terminal amino acid sequence of the lipase gene cloned in <i>E. coli</i> M15[pREP4] using pQE-60 vector	76
3.2) Expression of the lipase gene in <i>E. coli</i>	77
3.3) Secondary structure prediction and solvent accessibility	79

Title	Page
3.4) Homology modeling and computer graphics of lipase	81
3.5) Site-directed mutagenesis	85
3.6) Purification of a thermostable lipase	87
3.7) Characterization of the purified lipase	94
3.7.1) Effect of pH on the lipase activity and stability	94
3.7.2) Effect of temperature on the lipase activity and stability	94
3.7.3) Substrate specificity	97
3.7.4) Study of kinetic parameters (K_m and V_{max}) of the lipase	98
3.7.5) Positional specificity	100
3.7.6) Effect of metal ions on the lipase activity	101
3.7.7) Effect of inhibitors on the lipase activity	102
3.7.8) Effect of detergents on the lipase stability	103
3.7.9) Effect of organic solvents on the lipase stability	104
3.7.10) Crystallization of the lipase	105
3.7.11) Comparison of the lipase structure from the structural modeling and X-ray crystallography	106
3.8) Chiral separation of lipase	108
Chapter 4 Discussion and Conclusion	
4.1) Cloning and overexpression of the lipase gene from <i>B. stearothermophilus</i> P1	114
4.2) Secondary structure prediction and structural modeling of a thermostable lipase	116
4.3) Purification and characterization of a thermostable lipase	117
4.4) Application of a thermostable lipase	120
4.5) Conclusions	121

LIST OF TABLES

Table	Page
1.1 Microbial lipases used as additives in household detergent	10
1.2 Biotechnological applications of bacterial lipases	12
2.1 All primers were used in the experiments	35
2.2 Amplification step for site-directed mutagenesis by using PCR	51
3.1 Comparison of the expressions of the native lipase P1 and the recombinant lipase P1 in the different vectors and hosts	78
3.2 Comparison of the lipase activities between the pQE-P1 and the mutant lipases	86
3.3 Summary of the purification of a thermostable lipase from <i>B. stearothermophilus</i> P1 (1 st procedure)	88
3.4 Summary of the purification of a thermostable lipase from <i>B. stearothermophilus</i> P1 (2 nd procedure)	93
3.5 The initial velocity (V_i) of the enzyme reaction using various substrate concentrations (S)	98
3.6 Effect of metal ions on the purified lipase	101
3.7 Effect of inhibitors on the purified lipase	102
3.8 Effect of detergents on the purified lipase	103
3.9 Effect of organic solvents on the purified lipase	104
3.10 Crystallographic statistics for <i>B. stearothermophilus</i> P1 lipase	106

LIST OF ILLUSTRATIONS

Figure	Page
1.1 Enzymatic reaction of a lipase catalyzing hydrolysis or synthesis of a triacylglycerol substrate	1
1.2 Reaction mechanism of lipases	6
1.3 Industrially important reactions catalyzed by a lipase	9
3.1 Nucleotide sequence of the lipase gene from <i>B. stearrowthermophilus</i> P1 cloned in <i>E. coli</i> DH5 α using pUC-19 vector and its deduced amino acid sequence	73
3.2 Agarose gel electrophoresis shows the digestion of the lipase gene with restriction enzymes	74
3.3 Screening of recombinant lipase cloned in <i>E. coli</i> M15[pREP4] using pQE-60 as an expression vector on agarose gel electrophoresis	75
3.4 Physical map of inserted lipase P1 after cloning of partial <i>Nco</i> I and <i>Hind</i> III fragments into pQE-60	76
3.5 Nucleotide sequence of the lipase gene from <i>B. stearrowthermophilus</i> P1 cloned into <i>E. coli</i> M15[pREP4] using pQE-60 as an expression vector	77
3.6 Expression of the cloned lipase from <i>B. stearrowthermophilus</i> P1 by IPTG induction	79
3.7 Secondary structure prediction, hydropathy profile, transmembrane and surface probability of a thermostable lipase gene from <i>B. stearrowthermophilus</i> P1	80
3.8 The pair wise alignment of model sequence of <i>B. stearrowthermophilus</i> P1 lipase (TLip) with reference models of lipases from <i>P. glumae</i> (1TAH) and <i>P. cepacia</i> (3LIP)	82

Figure	Page
3.9 The 3D structures of modeled lipase from <i>B. stearrowthermophilus</i> P1	83
3.10 SDS-PAGE shows the induction of cloned lipase P1 (pQE-P1) and its mutants	86
3.11 FPLC with Q HyperD anion-exchange chromatography of the purified lipase produced from <i>B. stearrowthermophilus</i> P1	88
3.12 SDS-PAGE of purified lipase from <i>B. stearrowthermophilus</i> P1	89
3.13 The calibration curve of molecular weight of protein standard by using SDS-PAGE	89
3.14 Mass spectrometry of the purified <i>B. stearrowthermophilus</i> P1 lipase	90
3.15 Analysis of the purity of the purified lipase P1 by HPLC	90
3.16 Purification of the lipase by perfusion chromatography with Poros 20 HQ column (4.6 x 100 mm) using a BioCAD workstation	92
3.17 Purification of the lipase by gel filtration chromatography with Sephacryl S-200HR column (1.6x100 cm)	92
3.18 SDS-PAGE of purified lipase from <i>B. stearrowthermophilus</i> P1	93
3.19 Effect of pH on lipase activity (A) and stability (B)	95
3.20 Effect of temperature on lipase activity and stability	96
3.21 Substrate specificity of the lipase using several <i>p</i> -NP esters and triacylglycerols	97
3.22 Michaelis-Menten type plot of lipase hydrolysis rate at different concentrations of <i>p</i> -NP caprate	99
3.23 Lineweaver-Burk plot between 1/initial velocity of reaction versus 1/ concentrations of <i>p</i> -NP caprate	99
3.24 Thin layer chromatography of the hydrolysis of the cloned lipase P1 on triolein substrates	100
3.25 Crystallization of the thermostable lipase from <i>B. stearrowthermophilus</i> P1	105
3.26 Comparison of the lipase structure from the structural modeling (A) and X-ray crystallography (B, C, D)	107

Figure	Page
3.27 Analysis of unreacted starting material of 3-phenoxy-1,2-propanediol catalyzed with lipase from <i>B. stearothersophilus</i> P1 by Chiralcel OD-RH	109
3.28 Analysis of unreacted starting material of 3-phenoxy-1,2-propanediol catalyzed with lipase from <i>B. stearothersophilus</i> P1 in acetone at room temperature (A) and 55°C (B) for 0.5, 1, 3 and 6 h by Chiralcel OD-RH	110
3.29 Analysis of unreacted starting material of 3-phenoxy-1,2-propanediol catalyzed with lipase from <i>B. stearothersophilus</i> P1 in dichloromethane at room temperature (A) and 55°C (B) for 0.5, 1, 3 and 6 h by Chiralcel OD-RH	111
3.30 Analysis of unreacted starting material of 3-phenoxy-1,2-propanediol catalyzed with lipase from <i>B. stearothersophilus</i> P1 in iso-octane at room temperature (A) and 55°C (B) for 0.5, 1, 3 and 6 h by Chiralcel OD-RH	112
3.31 Analysis of unreacted starting material of 3-phenoxy-1,2-propanediol catalyzed with various lipases in dichloromethane by Chiralcel OD-RH	113

ABBREVIATIONS

BSA	bovine serum albumin
CAPS	3-[cyclohexylamino]-1-propanesulfonic acid
CHAPS	3-([3-Cholamidopropyl]dimethylammonio)-1-propanesulfonate
dd.water	distilled, deionized water
DDT	dithiothreitol
E64	trans-epoxysuccinyl-L-lecylarnido(4-guanidino)butane
EDTA	ethylenediaminetetraacetic acid
kDa	kilo Dalton
IPTG	isopropyl- β -D-thiogalactopyranoside
LB	Luria broth
<i>p</i> -NP ester	<i>p</i> -nitrophenyl ester
PMSF	phenylmethanesulphonyl fluoride
PVDF	polyvinylidene difluoride
SDS	sodium dodecyl sulphate
