ACKNOWLEDGMENTS	iii
ABSTRACT	iv
LIST OF TABLE	xi
LIST OF ILLUSTRATIONS	xii
ABBREVIATIONS	xiv
 <b>Chapter 1      Introduction</b>	
1.1 Ceramics in the North of Thailand	1
1.2 Geographical facts concerning Lampang deposits of raw materials for the ceramic industry.	1
1.3 Geology of the Lampang clay deposits	5
1.4 Composition of Lampang white clay and Lampang pottery stone.	6
1.5 Evaluation of the present application	7
1.6 Evaluation of the present situation	7
1.7 Conclusions regarding present limitations	8
 <b>Chapter 2      Experimental</b>	
2.1 Sampling of representative raw Lampang clay	9
2.2 Preparation of raw Lampang clay	9
2.3 Characterization and evaluation of the dry ceramic clay-mineral.	
2.3.1 Particle size distribution	9
2.3.2 Chemical analysis	10
2.3.3 Mineralogical composition	10
2.3.4 Thermal analysis	
2.3.4.1 Differential thermal analysis (DTA)	10
2.3.4.2 Thermogravimetric analysis (TGA)	11
2.3.5 Cation exchange capacity	11

	Page
2.3.6 Surface area	12
2.3.7 Rheology of the clay slip	12
2.3.8 Property of the moist clay	
2.3.8.1 Plasticity	13
2.3.8.2 Shrinkage	13
2.3.8.3 Modulus of rupture as a measure of strength	13
2.3.9 Properties of the fired clay	14
2.4 Methods to refine the raw material.	14
2.5 Uses of Lampang clay	
2.5.1 Application for porcelain pottery production.	15
2.5.2 Application of the remaining part of Lampang clay for production of floor tile is explored.	15
<b>Chapter 3 Results and Discussion</b>	
3.1 Sample selection	16
3.2 Sample preparation	16
3.3 Characterization	
3.3.1 Grain size	17
3.3.2 Specific surface area	18
3.3.3 Chemical composition	19
3.3.4 Mineralogical composition	21
3.3.5 Exchange Capacity	23
3.3.6 Thermal Properties	24
3.3.7 Scanning electron microscope (SEM)	27
3.3.8 Behavior when heated to various temperatures.	30
3.3.9 Properties of slip made from Lampang clay.	
3.3.9.1 Deflocculant demand	32
3.3.9.2 Viscosity	33

	Page
3.3.9.3 Thixotropy	34
3.3.10 Casting behavior	37
3.3.11 Plastic behavior of moist clay samples	39
3.3.12 Drying behavior	
3.3.12.1 Dry shrinkage	40
3.3.12.2 Dry strength	41
3.3.13 Property of the Fired Clay	
3.3.13.1 Fired shrinkage	42
3.3.13.2 Strength of fired clay	44
3.3.13.3 Density after firing	45
3.3.13.4 Porosity after firing	46
3.3.13.5 Whiteness	48
3.3.13.6 Scanning electron microscope (SEM)	49
3.4 Options for the improvement of the quality of the white clay from Lampang.	
3.4.1 Physical refinement; separation by particle size	
3.4.1.1 Wet vibration sieve screen	51
3.4.1.2 Wet tunnel sieve screen	52
3.4.1.3 Hydrocyclone	53
3.4.2 Chemical Treatment	55
3.4.3 Magnetic Treatment	56
3.4.4 Preliminary conclusions	58
3.5 Use of refined materials for the production of porcelain and other new types of ceramic products.	
3.5.1 Use of Lampang clay for the production of porcelain	58
3.5.1.1 Possible porcelain formulations	59
3.5.1.2 Properties of porcelain types	60
3.5.1.3 Conclusion	64

	Page
3.5.2 Application for floor tile	
3.5.2.1 Possible floor tile formulations	64
3.5.2.2 Properties of floor tile types	65
3.5.2.3 Conclusion	66
3.5.3 Conclusion regarding the use of refined materials	66
<b>Chapter 4      Conclusions</b>	
4.1 Characterization and valuation of the Lampang clay.	67
4.2 Possibilities for refining Lampang clay.	68
4.3 Uses of the refined Lampang clay.	69
<b>REFERENCES</b>	71

## LIST OF TABLES

Table	Page
1.1 Chemical composition of white clay and pottery stone from Lampang <sup>1</sup> .	6
3.1 Fractions of Lampang white clay with various particle sizes.	16
3.2 Specific surface area of Lampang white clay after sieving.	18
3.3 Chemical composition of Lampang white clay in percentage.	20
3.4 Mineral composition of Lampang white clay in percentage.	21
3.5 Adsorption of cations and exchange capacity of Lampang white clay.	23
3.6 Weight percent of various phases as a function of temperature in raw material and various fraction (< 63 microns, < 40 microns, < 10 microns).	30
3.7 Percentage of iron oxide form in samples of Lampang clay.	55
3.8 Chemical composition of treated Lampang clay sample M.	56
3.9 Mineral composition and whiteness of treated Lampang clay sample M.	57
3.10 Whiteness after firing of M sample showing differences of material before and after magnetic processing. Different test pieces have been fired to different temperatures.	57
3.11 Possible porcelain formulas.	59
3.12 Mineral composition of both possible porcelain formulas.	59
3.13 Chemical composition of both possible porcelain formulas.	59
3.14 Body forming from slurry by cast shaping.	60
3.15 Shrinkage of both possible porcelain formulas.	60
3.16 Bending strength of both possible porcelain formulas.	61
3.17 Whiteness after firing of both possible porcelain formulas.	61
3.18 Density, Water absorption and phase composition after firing of two possibility porcelain formulas, reduction atmosphere, industrial kiln. –	62
3.19 Some floor tile formulations.	64
3.20 % Water absorption after firing	65
3.21 % Open porosity after firing	65
3.22 Bulk density after firing (g/cm <sup>3</sup> )	65
3.23 Bending strength after firing (N/mm <sup>2</sup> )	66

## LIST OF ILLUSTRATIONS

Figure		Page
1.1	White clay and pottery stone deposits in Lampang province.	3
1.2	Map ratio 1 : 50,000 explain the location of white clay and pottery stone of the Thai Kaolin's mine and Mrs.Sareerat's mine.	4
3.1	Particle size distribution of Lampang white clay.	17
3.2	Specific surface area for each of three samples of Lampang white clay.	19
3.3	Chemical composition of Lampang clay.	20
3.4	Mineral composition of Lampang clay samples.	22
3.5	Cation exchange capacity of Lampang clay.	23
3.6	Differential thermo analytical behavior of Lampang clay	24
3.7	Differential thermal gravimetry of Lampang white clay	25
3.8	Thermal expansion of Lampang white clay	26
3.9	Picture of raw Lampang clay at room temperature, 3000x magnification	27
3.10	Picture of Lampang clay sample with all particles < 63 microns room temperature at 3000x magnification.	28
3.11	Picture of the Lampang clay sample consists of particles < 40 microns at room temperature, 3000x magnification.	28
3.12	Picture of the Lampang clay sample with all particles < 10 microns at room temperature, 3000x magnification.	29
3.13	Deflocculant demand of Lampang white clay after size grading.	32
3.14	Viscosity curve of Lampang clay.	33
3.15	Flow curve of Lampang clay < 63 microns.	35
3.16	Flow curve of Lampang clay < 40 microns.	35
3.17	Flow curve of Lampang clay < 10 microns.	36
3.18	Casting rate of Lampang clay.	38
3.19	Stress and maximum deformation of most Lampang clay as a function of water content.	39
3.20	Dry shrinkage of Lampang clay for each of three samples.	40

Figure	Page
3.21 Dry bending strength of Lampang clay for each of three samples.	41
3.22 Fired shrinkage of Lampang clay after sieving and firing.	43
3.23 Bending strength of Lampang clay after sieving and firing.	44
3.24 Bulk density and true density of Lampang clay.	45
3.25 Porosity of Lampang clay after firing.	47
3.26 Whiteness of Lampang clay after firing.	48
3.27 Scanning electron microscope of Lampang clay sample C (particles < 63 microns) fired to 1350 <sup>0</sup> C at 3000x magnification.	49
3.28 Scanning electron microscope of Lampang clay sample M (particles < 40 microns) after firing to 1350 <sup>0</sup> C at 3000x magnification.	50
3.29 Scanning electron microscope of Lampang clay sample F (particles < 10 microns) after firing to 1350 <sup>0</sup> C at 3000x magnification.	50
3.30 Scheme of wet vibration sieve screen.	52
3.31 Scheme of wet tunnel sieve screen.	52
3.32 Scheme diagram of the technological process for Kaolin mine in Germany.	53
3.33 Scheme diagram of Kaolin classification by means of hydrocyclones.	54
3.34 Scanning electron microscope of sample P-1 after firing to 1370 <sup>0</sup> C in a reducing atmosphere.	62
3.35 Scanning electron microscope of sample P-2 after firing to 1370 <sup>0</sup> C in a reducing atmosphere.	63
3.36 Sample crucibles of both porcelain compositions (fired to 1370 <sup>0</sup> C in a reducing atmosphere) are shown. The crucible on the left is P-1 and the one on the right is P-2.	63

## ABBREVIATIONS

$^{\circ}\text{C}$	Degree Selcius
$\mu\text{m}$	Micrometer or microns
L.O.I.	Loss on Ignition
OF	Oxidation Firing
RF	Reduction Firing
mm.	Millimeter
cm.	Centimeter
m.	Meter
$\text{m}^2$ .	Square Meter
km.	Kilometer
U	Unfractioned Lampang clay
C	Course sieved with all particles smaller than 63 microns
M	Medium sieved with all particles smaller than 40 microns
F	Finest fraction with all particles smaller than 10 microns
$\text{m}^2/\text{g}$	Square meter per gram
meq./100g	Milli-equivalent per 100 gram
$\mu\text{V}$	Micro volt
Sec.	Second
M Pa	Meka Pascal
$\text{N}/\text{mm}^2$	Newton per square millimeter
g/cc	gram per cubic centimeter
T	Tesla (Magnetic field)
