ACKNOWLEDGEMENT

The author would like to express his heartfelt gratitude to his advisor, Asst. Prof. Nipon Rattanawangcharoen, for his supervision and suggestion during the course of this research. A couple of sentences cannot adequately express the measure of gratitude which is due to his encouragement and support throughout this work. It was Asst. Prof. Nipon who infused the interest in the author which led him to work in this area of research.

He would also like to express his grateful thank to Dr. Apiwat Oranratnachai, Assoc. Prof. Chesada Kasemset and Asst. Prof. Teerapong Senjuntichai for serving in the examination committee. Especially, he deeply appreciates the suggestion and teaching of Asst. Prof. Nipon Rattanawangcharoen during graduate work at the Chiang Mai University. Sincere appreciation is extended to Prof. Subhendu K. Datta from the University of Colorado at Boulder, for his advice and suggestion to improve the thesis.

The appreciation is also extended to his friends especially to Miss Churindhorn Angrekhapanich, Mr. Chalernpol Karnchanaworanun, Prof. Tom Vadney, and Mr. David Wyatt from the University of Manitoba who helped in the literature search and to all of the staff in the Faculty of Engineering, Chiang Mai University who have been very supportive throughout this work.

Finally, the author wishes to dedicate this thesis to his beloved parents and brothers whose unflinching love and inspiring encouragement helped him to achieve his success.
