Acknowledgements

This thesis can not be complete without the help of my supervisor Associate Professor Dr. Benjavun Ratanasthien, I would like to thank you for her advice, guidance, financial support and encouragement to complete this work.

For the analytical work, I would like to thank Professor Dr. Isao Takashima for his advice, assistance and just plain attitude with the XRD, XRF and ICP analyses during almost 5 months in Akita University, Japan.

Gratitude is also extended to the EGAT personal at the mine site for the permission to access some information, sample collection.

I would like to thank Ajarn Sidney who checks wording and spelling in this thesis, Mr. Surake Kongjai who supports me all facilities during sample collection in Mae Moh Mine, Ajarn Weerapan Srichan who encourage me all the time, Mr. Thanuchai Silaratana for computer services and special thanks to Khun Sasiprapa for many helps and also all graduate students, this thesis can not be complete without their help, cheers up!

Finally, I would like to thank of my grandfather, parents for financial support and encouragement throughout the course of my study and I would like to say something 'Dad, I'll do my best in the future life, don't worry about it'.
