ACKNOWLEDGEMENTS

I wish to express my heartfelt gratitude and appreciation to my supervisor, Dr. Robert Molloy, for his kind supervision, valuable guidance and constant encouragement throughout the course of this research project.

I am also grateful to Dr. Winita Punyodom and Dr. Teerapol Wongchanapiboon for kindly acting as Examiners for this research project.

I also wish to express my sincere gratitude to the Department of Chemistry, Faculty of Science, Chiang Mai University, for kindly providing me with the laboratory and library facilities which made this study possible and, in particular, to Mr. Somsak Aramruang and Mr. Narongchai Tongpituk, for their help with the nuclear magnetic resonance ($^1\text{H-NMR}$) and infrared spectroscopic analyses respectively.

Similarly, I would also like to thank Ms. Montira Sriyai and Ms. Nantarat Suebsanit, researchers in the Biomedical Polymers Research Unit, for their guidance and useful suggestions concerning the differential scanning calorimetry (DSC) part of the work.

Last and most of all, I am indebted to my family for their tender love, care and to all of my friends for their endless encouragement which has enabled me to achieve success in my postgraduate education.

Butsakorn Waraegsiri
