CHAPTER 1 INTRODUCTION	
1.1 Arsenic	1
1.1.1 Information about arsenic	1
1.1.2 Arsenic in environment, exposed and effect of arsenic	5
1.1.3 Chronic arsenic poisoning in Ronpibul district, Nakhon Sri Thammarat province	8
1.1.4 The method for arsenic determination	10
1.1.5 Treatment technologies/removal from water	11
1.2 Activation analysis	14
1.2.1 Neutron activation analysis	14
1.2.2 Neutron source	16
1.2.3 Principle of activation analysis	17
1.2.4 Measurement of gamma ray	23
1.2.5 Quantitative determination of activity	24
1.2.6 Sensitivities for determination of elements by NAA	26
1.2.7 Preconcentration of arsenic for NAA	29
1.3 Objectives of this research	32
CHAPTER 2 EXPERIMENTAL	
2.1 Apparatus and material	33
2.1.1 Apparatus	33
2.1.2 Chemicals and materials	33
2.2 Sample material	37

2.3 NAA experiment	40
2.3.1 Preliminary study	40
2.3.1.1 Variation of pH	40
2.3.1.2 Coprecipitation yield	40
2.3.2 Qualitative analysis	41
2.3.3 Precision of the method	42
2.3.4 Percent recovery	42
2.3.5 Quantitative analysis	43
2.3.6 Detection limit	44
2.4 Calculation of results	45
CHAPTER 3 RESULTS AND DISCUSSION	
3.1 Preliminary study	46
3.1.1 Variation of pH	46
3.1.2 Percent precipitation	49
3.2 Qualitative	50
3.3 Precision of the method	56
3.4 Percent recovery	59
3.5 Quantitative analysis	60
3.6 Detection limit	64
CHAPTER 4 CONCLUSION	65
CHAPTER 5 REFERENCES	67
APPENDIX A	71
APPENDIX B	72
VITA	73

LIST OF TABLES

Table	Page
1.1 General Informations of Arsenic	4
1.2 Arsenic concentration in the environment	7
1.3 Classification of chronic arsenic poisoning using as standard diagnosis in Thailand, 1987-1994	9
1.4 Number of chronic arsenic poisoning in Ronpiboon District and other districts, by stage, 1987-1988	9
1.5 Classification of the methods for arsenic determination	11
1.6 Examples of some techniques for arsenic determination	12
1.7 Activation analysis compared to other analytical techniques for trace elements	13
1.8 Neutron capture cross section (σ_{γ}) and resonance integral (I_{γ}) (in barns) for some typical activation targets	19
1.9 Half life values for typical activation products	21
1.10 Estimated detection limits for INAA using decay gamma rays Assuming irradiation in a reactor neutron flux of $1 \times 10^{13} \text{ n cm}^{-2} \text{ s}^{-1}$	27
1.11 The elements which can be analyzed by neutron activation analysis ○ technique	28
1.12 γ -energies of radioisotope ^{76}As	32
3.1 Gamma-ray energy of radioisotopes found	50
3.2 Radioisotopes induced from epithermal neutron activation of elements present in coprecipitated of water samples with Pb(PDC)_2 with irradiation times = 15 minutes, cooling times = 30 minutes and measuring times = 100s	54
3.3 The element found in water by NAA	55
3.4 Counts of coprecipitated As-Pb(PDC)_2 and concentration of arsenic with irradiation times = 1 hr, cooling times = 1 hr and measuring time = 100 s	56

- 3.5 Percent recovery from spiked and unspiked samples from eight individual experiment. Irradiation time = 1 hr , cooling time = 1 hr and measuring time = 100 s 60
- 3.6 Concentration of arsenic in contaminated water samples from Ronpiboon district with irradiation time =11 hr, cooling time = 13 hr and measuring time = 100 s 61
- 3.7 Concentration of arsenic in contaminated water samples from Ronpiboon district compared with other water samples from literatures 64

LIST OF ILLUSTRATIONS

Figure	Page
1.1 Arsenic compounds	1
1.2 The effects of arsenic in drinking water. Skin damage of low arsenic poisoning in one victim.	6
1.3 Diagram illustrating the process of neutron capture by a target nucleus followed by the emission of gamma rays	15
1.4 A typical reactor neutron energy spectrum showing the various components used to describe the neutron energy regions	16
1.5 Activation curve	23
1.6 Diagram shown neutron activation analysis method	29
2.1 The Thai Research Reactor (TRR-1/M1)	34
2.2 HPGe detector	35
2.3 High voltage power supply, preamplifier and amplifier	35
2.4 Computer with the Gamma Acquisition Analysis program	36
2.5 Vials	36
2.6 Rabbit	37
2.7 Map of Ronpiboon district in Nakhon Sri Thammarat province	38
2.8 Map of Moo 1-14 of Ronpiboon district in Nakhon Sri Thammarat province	39
2.9 Irradiation times (Ti) and cooling times (Td) for qualitative analysis of samples	41
2.10 The standard and samples in the rabbit with 2 vials of each sample together with 3 vials of standard	43
2.11 Schematic diagram shown experiment for coprecipitation of sample	44
3.1 A plot of count rates of $^{76}\text{As(III)}$ vs. pH, irradiation times = 15 minutes, cooling times = 20 hr and measuring times = 100 s	46
3.2 γ -spectra of $^{76}\text{As(III)}$ induced from epithermal neutron activation after irradiation in CA2 tube: standard As(III) = 500 ppm, irradiation times = 15 minutes, cooling times = 20 hr and measuring times = 100 s	47

- 3.3 A plot of percent coprecipitation vs added standard As(III) 49
- 3.4 γ -spectra of radioisotopes induced from epithermal neutron activation of elements present in coprecipitated of water samples with $\text{Pb}(\text{PDC})_2$, irradiated in CA2 tube with irradiation times = 15 minute, cooling time are (a) 30 minutes and (b) 3 hr, measuring time = 100 s. 51
- 3.5 γ -spectra of radioisotopes induced from epithermal neutron activation of elements present in coprecipitated of water samples with $\text{Pb}(\text{PDC})_2$, irradiated in CA2 tube with irradiation time = 1 hr, cooling time are (a) 1 hr and (b) 3 hr and (c) 20 hr, measuring time = 100 s. 52
- 3.6 γ -spectra of radioisotopes of induced from epithermal neutron activation of elements present in coprecipitated of water samples with $\text{Pb}(\text{PDC})_2$, irradiated in CA2 tube with irradiation time = 11 hr, cooling time = 13, measuring time are (a) 100 s and (b) 1000 s. 53
- 3.7 Gamma-spectra of induced radioisotopes after irradiation the coprecipitate As- $\text{Pb}(\text{PDC})_2$ from water sample no. 4 with epithermal neutrons in CA2 tube. Irradiation time = 11 hr, cooling time = 13 hr and measuring time = 100 s. 61
- 3.8 Chart represents concentration of arsenic in eight contaminated water samples from Ronpiboon district, Nakhon Sri Thammarat province with irradiation time = 11 hr, cooling time = 13 hr and measuring time = 100 s. 62

ABBREVIATIONS AND SYMBOLS

AFS	atomic fluorescence spectrometry
DGNAA	delayed gamma-ray neutron activation analysis
EDXRF	energy dispersive X-ray fluorescence
E-T	emission transmission GFAAS
FWHM	fullwidth at half maximum
FNAA	fast neutron activation analysis
HG	hydride-generation
HGAAS	hydride-generation atomic absorption spectrometry
HPGe	hyperpure (or intrinsic) germanium detector
HPLC	high performance liquid chromatography
INAA	instrumental neutron activation analysis
LOD	limit of detect ion
MCA	multi-channel analyzer
NIST	the Nation Institute of Standard and Technology
NAA	neutron activation analysis
PGNAA	prompt gamma-ray neutron activation analysis
SRM	standard reference material
TNAA	thermal neutron activation analysis
RSD	relative standard deviation
XRF	X-ray fluorescence
A	atomic weight
A_0	activity at the end of the irradiation time
A_s	the saturation activity
A_{sam}	activity of sample
A_{std}	activity of standard
C_{sam}	count of element in sample
C_{std}	count of element in standard
Ci	Curi
N	number of nuclei

N_A	Avogadro's number
(n,γ)	(neutron, gamma) reaction
(n,p)	(neutron, proton) reaction
(n,α)	(neutron, alpha) reaction
nd	not detected
ppm	part per million
ppb	part per billion
P	branching ratio
sam	sample
std	standard
t_c	counting time
t_d	decay time
t_m	measuring time
T, t	irradiation time
W_{sam}	weight of sample
W_{std}	weight of standard
W	mass of element
ε	molar absorptivity
ϕ	neutron flux
ϕ_{th}	thermal neutron flux
ϕ_{epi}	epithermal neutron flux
θ	isotopic abundance
σ	neutron cross section
σ_{th}	thermal neutron cross section
σ_γ	neutron capture cross section
λ	decay constant
I_γ	capture resonance integral
