ACKNOWLEDGEMENT

I am sincerely grateful to Associate Professor Dr. Nopporn Sittisombut, my thesis major advisor, for his supervision and guidance throughout this study.

I am also indebted to Associate Professor Dr. Niwat Maneekarn, chairman of the Department of Microbiology, Faculty of Medicine, my general advisor and thesis co-advisor for his valuable advice and encouragement throughout my study.

I give deep appreciation to Dr. Poonsook Keelapang, Ajarn Rungtawan Sriburi and all faculty members of the Department of Microbiology, Faculty of Medicine, for their help in laboratory techniques and their valuable suggestions.

Many thanks are also given to all the virus laboratory technicians for their assistance in my experiments.

Last but not least, I am grateful to my parents for their support and dedication.

This work was supported by the National Science and Technology Development Agency (TGIST program), Ministry of Science and Technology, Bangkok, Thailand and Thailand-Tropical Diseases Research Programme (T-2).
