## ACKNOWLEDGEMENTS

I wish to express my grateful appreciation to my advisor, Assoc. Prof. Dr. Duangta Kanjanapothi, for the excellent instruction, guidance and understanding during the various stages of this research and helpful criticism in the writing of this manuscript. Without her encouragement and interest, this thesis could never have been succeeded.

I am deeply indebted to Assoc. Prof. Dr. Ampai Panthong, for her devotion and enthusiastic teaching, which were instrumental in promoting my educational and ethical development. I am especially grateful to Asst. Prof. Dr. Tawat Taesotikul, for his initiating ideas, supervision, teaching in laboratory techniques and statistical analysis of the results.

I am also grateful to Assoc. Prof. Dr. Sophon Roengsumran and Assoc. Prof. Dr. Amorn Petsom of the Department of Chemistry, Faculty of Science, Chulalongkorn University, who supported the compound (DS4) in the research.

Deep appreciations are especially extended to Dr. Chaiyong Rujjanawate and staff of the Laboratory of Natural Products, Chulabhorn Research Institute at Chiang Mai University, who assisted in many of the laboratory studies.

Through the project "gastrointestinal effects" of Thai medical plants, financial support from the Chulabhorn Research Institute is gratefully appreciated.

B. Janthawan
