## ACKNOWLEDGEMENTS

Financial support for this study was provided by Thai Royal Government.

I would like to express deep gratitude and appreciation to my supervisor, Professor Dr. Kittichai Wattananikorn, for his supervision, valuable critical discussions, and reading of the draft thesis. Many thanks go to Assistant Professor Sodchuen Viboonsek, and Mr. Pitoon Wanaphongse for their useful advice concerning theoretical aspects and scintillation cells calibration, and special thank to Mr. Sidney L. Rieb for correcting my English.

There were many people whose assistance was very important in making this thesis complete. These include Dr. Pisanu Wongpornchai, and Assistant Professor Dr. Fongsaward S. Singharajwarapan. Also, there were department members and others who helped and gave much valuable advice, particularly Mr. Jirapong Sungkoom, Mr. Adul Yawichai, and Mr. Theerapong Silawongsawat.

I also am grateful to Mr. Sayompoo Emharuthai, who supplied digital maps, and to Mr. Sujinchana Ruamsuk, and Mr. Kriangkamon Silapasert, who helped for field works and data managements.

Finally, I also thank my beloved mother and father for their most valuable support.
