

TABLE OF CONTENTS

	Page
Acknowledgements	iii
Abstract in Thai	iv
Abstract in English	v
Chapter 1 Introduction	1
Chapter 2 Preliminaries	3
2.1 The Logistic population model.	3
2.2 Integral equations.	4
2.2.1 Volterra integral equations.	4
2.2.2 Fredholm integral equations.	4
2.3 The Volterra model	5
2.4 Series solutions of Volterra integral equations of the second kind	5
2.5 Direct solutions of Fredholm integral equations of the second kind	6
2.6 The decomposition method	7
2.6.1 Description of the technique	7
2.6.2 Algorithm for calculating Adomian polynomials for nonlinear operator	8
2.7 Padé approximation	11

Chapter 3 Main results	13
3.1 The direct solution method combined with the series solution method.	13
3.1.1 Analysis of the method.	13
3.1.2 Numerical results.	15
3.2 The direct solution method combined with the decomposition method.	19
3.2.1 Analysis of the method.	19
3.2.2 Numerical results.	21
3.3 The direct solution method combined with the method of converting the model to a nonlinear ODE. . . .	26
3.3.1 Analysis of the method.	26
3.3.2 Numerical results.	29
3.4 Analysis	35
Chapter 4 Conclusion	40
Bibliography	42
Appendix	43
Vita	46
