ACKNOWLEDGEMENTS

The author wishes to express her heartfelt gratitude and appreciation to Assistant Professor Dr. Mongkon Rayanakorn, her supervisor, for his kind supervision, invaluable guidance and constant inspiration throughout the course of this research work. The author is deeply grateful to Dr. Sunanta Wangkarn, her co-supervisor, for valuable guidance and advice on this research work. The author is also grateful to Associate Professor Dr. Surasak Watanesk for valuable comments and suggestions on this research work.

The author gratefully acknowledges the Department of Chemistry, Chiang Mai University for the provision of excellent laboratory facilities. The technical staff of the Chemistry Department's central instrument room, especially Mr. Pisan Kitsawatpaiboon and Ms. Tanaporn Na-chiangmai, are sincerely acknowledged for their admirable technical service throughout this research work.

The author is very much indebted to the National Science and Technology Development Agency (NSTDA) of Thailand and Postgraduate Education and Research Program in Chemistry (PERCH) of the Thai Ministry of University Affairs for the graduate scholarships awarded, which relieved the author's financial burden and made it possible for her to complete this research.

Thanks are also due to all of the author's friends and graduate students in the Department of Chemistry, Faculty of Science, Chiang Mai University, for their useful help and understanding throughout this work.

Finally, the author is profoundly grateful to her parents and also to her brother and sisters for their tender love, care and endless encouragement, which enabled her to carry out this research work successfully.

Kanokkarn Sa-nguanwong
