ACKNOWLEDGEMENTS	iii
ABSTRACT (ENGLISH)	iv
ABSTRACT (THAI)	vi
TABLE OF CONTENTS	viii
LIST OF TABLES	xii
LIST OF ILLUSTRATIONS	xiv
ABBREVATIONS AND SYMBOLS	xvi
CHAPTER 1: INTRODUCTION	1
1.1 Iron	1
1.1.1 The importance of iron determination	1
1.1.2 Methods for iron determination	2
1.1.3 Needs for method development for iron determination	12
1.2 Phosphate	13
1.2.1 The importance of phosphate determination	13
1.2.2 Methods for phosphate determination	14
1.1.3 Need to develop method for phosphate determination	18
1.3 Aims of these studies	20
CHAPTER 2: EXPERIMENTAL	22
2.1 Chemicals	22
2.2 Preparation standard solutions and reagents	23
2.3 Instruments and apparatus	26

2.4 FIA set ups 27

2.4.1 FI system for determination of iron using salicylic acid 27

2.4.2 FI system for on-line preconcentration and electrochemical detection of phosphate 27

2.4.3 FI system for on-line sulfide removal for phosphate determination 28

2.4.4 FI system for simultaneous determination of phosphate and silicate using stopped FIA 29

2.5 Other set-ups 29

2.5.1 Capillary electrophoresis 29

2.5.2 Voltammetry 30

CHAPTER 3: RESULTS AND DISCUSSION 31

3.1 Determination of iron by FIA using salicylic acid 31

3.1.1 Preliminary studies 31

3.1.1.1 Absorption spectra of Fe(III)-salicylate complexes 31

3.1.1.2 Study of the molar absorptivity of Fe(III)-salicylate complexes 33

3.1.1.3 FIA system set up and study for conditions 35

3.1.2 Application of the developed method to pharmaceutical preparation samples and method validation 38

3.2 Determination of Fe(II) and Fe(III) by Capillary Electrophoresis and Voltammetry 42

3.2.1 Capillary Electrophoresis 42

3.2.2 Voltammetric study for possibilities of speciation of Fe(II) and Fe(III) 47

3.3 Phosphate determination using flow injection analysis with electrochemical detection 51

3.3.1 Direct FIA system for phosphate determination 51

3.3.1.1 Study of the reproducibility of the signal 53

3.3.1.2 Interference study 54

3.3.1.3 Samples determination and method validation 56

3.3.2 Develop method for on-line preconcentration of phosphate 57

3.3.2.1 The system used and calibration data 58

3.3.2.2 The effect of chloride on phosphate adsorption 59

3.3.2.3 Samples determination and method validation 59

3.3.2.4 Single standard calibration 60

3.4 On-line sulfide removal for phosphate determination 62

3.4.1 Analytical wavelengths for the determination of phosphate by the molybdenum blue method with various reducing agents 63

3.4.2 Quantify sulfide interference using tin(II) chloride and ascorbic acid as reducing solutions 65

3.4.3 Test effectiveness of batch acidify to remove sulfide 69

3.4.4 On-line oxidation of sulfide using potassium permanganate 72

3.4.5 Test for organic phosphate 74

3.4.6 Method validation and sample determination 75

3.5 Simultaneous determination of phosphate and silicate using stopped FIA 78

3.5.1 Simultaneous determination of phosphate and silicate 80

3.5.2 Samples determination and method validation 82

CHAPTER 4: CONCLUSIONS 84

REFERENCES 87

APPENDIX 91

VITA 104

THE RELEVANCE OF THE RESEARCH WORK TO THAILAND 107

LIST OF TABLES

TABLE		Page
1.1	The example methods for iron determination	6
1.2	Analytical methods for determination of phosphate	15
3.1	Price comparison of chemicals for iron determination	34
3.2	The conditions for Fe(III) determination using salicylate reagent	36
3.3	Determination of iron in drug samples by the proposed FIA method and USP method	41
3.4	The conditions for capillary electrophoresis	43
3.5	Conditions for determination of phosphate using the FIA electrochemical detection	53
3.6	Analysis of reference fresh water and seawater	56
3.7	Analysis of sea water sample	57
3.8	Recoveries of spike dissolved reactive phosphorus to tap water samples	60
3.9	Percent change of orthophosphate standards concentration range of 50-1000 μg l^{-1} which contained sulfide of various concentrations	67
3.10	Percent change of orthophosphate standards concentration range of 50-1000 μg l^{-1} which contained sulfide of various concentrations	68
3.11	Test of the effectiveness of batch pretreatment to remove sulfide using 0.01 M sulfuric acid	70
3.12	Test of the effectiveness of batch pretreatment to remove sulfide using 0.05 M sulfuric acid	71

3.13 On-line oxidation of sulfide using potassium permanganate 73

3.14 Samples determination using potassium permanganate method and comparison of the results to the other methods 76

3.15 Recoveries of spiked dissolved reactive phosphorus to water samples 77

3.16 Conditions for simultaneous determination of phosphate and silicate using the semi-automated stopped-FI-Analyzer 79

3.17 Determination of phosphate and silicate by the proposed stopped-FI method and the standard method 83

LIST OF ILLUSTRATIONS

FIGURE	page
2.1 FI manifold for determination of iron using salicylic acid	27
2.2 FIA manifolds for the direct determination of orthophosphate	28
2.3 FIA manifold for on-line sulfide removal for phosphate determination	29
2.4 Stopped-FIA manifold for simultaneous determination of phosphate and silicate	29
2.5 Capillary electrophoresis diagram	30
2.6 The voltammetric cell and electrode system	30
3.1 The absorption spectra of mixtures containing of Fe(III) and salicylate	31
3.2 Plots of absorbances vs Fe(III) concentrations in 0.1 M salicylate	33
3.3 FIAgrams for the determination of Fe(III) using salicylate	37
3.4 Calibration graph of Fe(III) determination using salicylate	37
3.5 Electropherograms obtained by an injection of a mixture solution	44
3.6 The structural formula of PAR	44
3.7 Distribution profile of major spicies of PAR	45
3.8 Voltammograms obtained by a serial mixture solutions	48
3.9 Voltammograms obtained by a serial mixture solutions	50
3.10 Reproducibility of phosphate peak height concentration of 50 and 500 μg P l^{-1}	54
3.11 FI gram and calibration graph of standard phosphate concentration 0.1, 0.5, 1.0, 2.0, 5.0 and 10.0 μg l^{-1}	58
3.12 The effect of chloride on peak signal response of 5 μg P l^{-1}	59

3.13 Single standard calibration using 5.0 and 10.0 μg P l^{-1} 61

3.14 Absorption curves for molybdenum blue formed with various reducing agents 63

3.15 Absorption spectra obtained by using phosphate (1000 μg P l^{-1}) in the molybdenum blue method 64

3.16 Peak heights of signals obtained in a molybdenum method 65

3.17 The effect of sulfide on phosphate determination using tin(II) chloride as a reducing solution 67

3.18 The effect of sulfide on phosphate determination using ascorbic acid as a reducing solution 68

3.19 Acidification of sulfide in standard phosphate using 0.01 M sulfuric acid 70

3.20 Acidification of sulfide in standard phosphate using 0.05 M sulfuric acid 71

3.21 On-line oxidation of sulfide using potassium permanganate 73

3.22 Test of the oxidation potential of potassium permanganate on organic phosphates 75

3.23 Stopped-FI profiles of phosphate, silicate and mixture 79

3.24 Calibration graph of phosphate 80

3.25 The correlation between I_p and D_p 81

3.26 Calibration graph of silicate 81
