ABSTRACT (ENGLISH)	iv
ABSTRACT (THAI)	v
LIST OF TABLES	ix
LIST OF ILLUSTRATIONS	x
CHAPTER I INTRODUCTION	1
1.1 Sequential injection analysis (SIA)	1
1.1.1 Introduction	1
1.1.2 Principle of SIA	2
1.1.3 Components of SIA	4
1.1.3.1 Propulsion system	4
1.1.3.2 Distribution system	4
1.1.3.3 Transportation system	4
1.2 Lab-on-valve (LOV)	5
1.2.1 Introduction	5
1.2.2 Principle of LOV	7
1.2.3 Components of LOV	7
1.3 Acidity	7
1.3.1 General background	7
1.3.2 Application of citric acid	9
1.3.3 Determination of citric acid and acidity as citric acid content	9
1.3.3.1 Volumetric method	9
1.3.3.2 Spectrophotometry	10
1.3.3.3 Ion chromatography (IC)	10
1.3.3.4 High performance liquid chromatography (HPLC)	10

1.3.3.5 Flow injection analysis (FIA) 11
1.3.3.6 Sequential injection analysis (SIA) 12
1.4 Research aims 12
CHAPTER II EXPERIMENT 13
2.1 Instruments, apparatus and chemicals 13
2.1.1 SIA-LOV analyzer 13
2.1.2 Chemicals 13
2.2 Samples 14
2.2.1 Samples for acidity determination 14
2.2.2 Samples preparation 15
2.3 Preparation of standard solutions and reagents 15
2.4 Determination of acidity by sequential injection with lab-on-valve method 17
2.4.1 SIA-LOV system 17
2.4.2 Procedure 18
2.4.3 Optimization of the SIA-LOV system 20
2.4.3.1 Effect of sugar solution concentration 21
2.4.3.2 Effect of concentration of indigo carmine indicator 22
2.4.3.3 Effect of dispensation flow rate 22
2.4.4 Determination of acidity in fruit juice samples 23
2.4.5 Precision 23
CHAPTER III RESULTS AND DISCUSSION 24
3.1 Preliminary conditions of SIA-LOV for determination of acidity 24
3.2 Determination of acidity by SIA-LOV method 29
3.2.1 Effect of sugar concentration 29
3.2.2 Concentration of indigo carmine indicator 34
3.2.3 Effect of dispensation flow rate 37
3.2.4 Summary of the selected conditions 40
3.2.5 Determination of acidity in fruit juice samples 41
3.2.5.1 Calibration graph 41
3.2.5.2 Accuracy and application of the method 43

LIST OF TABLES

Table		Page
2.1	List of fruit juice samples.	14
2.2	Preliminary condition for acidity determination.	20
3.1	The absorbance of 0-5%(w/v) sugar solution with water and 2%(w/v) sugar as reference solution.	30
3.2	Effect of the sugar concentration.	33
3.3	Effect of concentration of indigo carmine indicator.	36
3.4	Conditions for determination 0.0-1.2%(w/v) citric acid.	40
3.5	Calibration data of 0.0-1.2%(w/v) citric acid.	42
3.6	Comparison of % acidity found (expressed as citric acid) by SIA-LOV and standard titration method.	44
3.7	The summarization of t-test value for acidity determination in fruit juice.	47
3.8	Precision of citric acid determination by SIA-LOV method.	49

LIST OF ILLUSTRATIONS

Figure	Page
1.1 A conventional SIA setup is comprised of a bi-directional syringe pump, holding coil, multiposition valve, reaction coil (RC) and detector.	2
1.2 The principle of SIA. Each step can be described as follows: A = The sample was loaded into the holding coil, B = The reagent was loaded into the holding coil, C = The stack zone was aspirated into the holding coil to improve mixing and dispersion, D = The product was produced and was propelled to the detector and E = The product was monitored by the detector and the signal was recorded.	3
1.3 Lab-on-valve manifold.	6
1.4 Multi-purpose flow cell.	6
1.5 Structural formula of citric acid.	8
2.1 A schematic diagram of the SIA-LOV system for acidity determination.	18
2.2 The sequence of operation of SIA-LOV.	20
2.3 The sequence of operation for the study of the effect of sugar concentration.	21
3.1 Acid-base titration curve.	25
3.2 Titration graphs of acidity determination to set up preliminary conditions (a) between the pH of residual base and volume of acid (ml) and (b) between the concentration of residual base (M) and volume of acid.	26
3.3 Spectrum of indigo carmine indicator.	27
3.4 Summarization of preliminary condition for acidity determination.	27
3.5 Signal profile of various acidity values using the preliminary condition.	28
3.6 Calibration graph obtained using the preliminary condition.	28
3.7 Effect of concentration of sugar in solution.	31
3.8 Peak profiles of 0.0-1.2%(w/v) citric acid in (a) water and (b) 10%(w/v) sugar solution.	32
3.9 A calibration graph of 0.0-1.2%(w/v) citric acid (a) in water and (b) in 10%(w/v) sugar solution.	33

3.10 Peaks profile of 0.0-1.2%(w/v) citric acid using concentrations of indigo carmine indicator as follows: (a) 0.05%(w/v), (b) 0.10%(w/v), (c) 0.20%(w/v) and (d) 0.40%(w/v). 35

3.11 Calibration graphs obtained using different concentrations of indigo carmine indicator: (a) 0.05%(w/v), (b) 0.10%(w/v), (c) 0.20%(w/v) and (d) 0.40%(w/v). 36

3.12 Effect of concentration of indigo carmine indicator on (a) slope and (b) R^2 of calibration graph. 37

3.13 Peak profiles of 0.0-1.2%(w/v) citric acid using dispensation flow rate of: (a) 8.33 µl s^{-1} and (b) 16.66 µl s^{-1}. 38

3.14 Calibration graphs obtained using different dispensation flow rates as follows; (a) 8.33 µl s^{-1} and (b) 16.66 µl s^{-1}. 39

3.15 Peak profiles of 0.0-1.2%(w/v) citric acid. 41

3.16 A calibration graph method for determination of acidity obtained from SIA-LOV. 42

3.17 Comparison graph of acidity found in fruit juice samples by SIA-LOV and titration method. 45

3.18 Correlation graph of %(w/v) acidity found by using SIA-LOV and titration method. 46

3.19 Peak profiles of 11 replicates of 0.6%(w/v) citric acid in 10%(w/v) sugar solution. 48
