ACKNOWLEDGEMENTS

I would like to express my sincere gratitude and deep appreciation to Associate Professor Dr. Porn-ngarm Limtrakul, thesis advisor, whose special efforts, valuable suggestion, unforgettable support, professional guidance, excellent encouragement and patience throughout this study. Additionally, I am always thankful to all the wonderful staff members in the Department of Biochemistry, Faculty of Medicine, Chiang Mai University who always provided me with invaluable advice and assistance when needed.

Particularly, this thesis could not have been accomplished without the exquisitely helpful from Professor Dr. Michael M. Gottesman and Dr. Suresh V. Ambudkar of National Cancer Institute, at Bethesda, Maryland, United States of America, who provided me with invaluable KB-3-1, KB-V1 cells and some chemicals applied in the study.

A special appreciation is also expressed to Professor Dr.Hirota Fujiki and Dr. Kei Nakachi for providing the green tea flavonoids throughout this study.

I need to give a special note of thanks to Dr. Songyot Anuchapreeda for his kind suggestion and practical training.

I also need to express special acknowledgement to Faculty of Medicine for the financial support provided by Endowment Fund for Medical Research during the study.

I would like to express my gratitude to my dear friends and all dear people in Department of Biochemistry, Department of Microbiology, Faculty of Medicine, Chiang Mai University and AICR/Tissue culture laboratory for their help and warm friendship.

Finally, I am especially grateful to my parents and sister for their love, support, understanding and encouragement throughout my life.

Warunee Kumsaiyai
