ACKNOWLEDGEMENTS

First, I wish to express my appreciation to Associate Professor Dr. Luksana Makonkawkeyoon, for her excellent guidance, valuable advice, interest in solving many problems, patience, and her constant encouragement during the course of this study. Without her support, this thesis would not have been successful.

A special appreciation is also expressed to Assistant Professor Dr. Sirikarn Yamada, Department of Surgery, Faculty of Medicine, Chiang Mai University and Dr. Takeshi Matsuhisa, Tama-Nakayama Center, Nippon Medical School for his kind support with the plasma pepsinogen measurements and valuable advice throughout this study. Without their support and encouragement, this thesis could not have been completed.

I would like to extend my gracious thank to Professor Dr. Floyd Dunn, Professor Dr.T. Randall Lee and Dr. Wirote Tuntiwechapikul for their valuable suggestions and consultation in this thesis.

I would like to thank Mr. Somphon Phraephan, Mr. Worakarn Wongchankhum and Mr. Pahol Sansomchai for their instruction, training, friendship, and their generous help during this study. I am also thankful to all staff members in the Department of Biochemistry, Faculty of Medicine, Chiang Mai University who have always provided me with valuable advice and assistance when needed.

I also need to express special acknowledgement to Faculty of Medicine for the financial support provided by Endowment Fund for Medical Research, Chiang Mai University, Thailand during the study.

Finally, I am especially grateful to my father, my mother, and my brothers for their love, wonderful inspiration, useful guidance, and emotional assistance, understanding, and encouragement throughout my life.

Suparp Chaidatch
