27 April 2004

## ACKNOWLEDGEMENTS

My sincere gratitude to Dr. Porntip Chantaramongkol, for all the time and help she gave me to complete this Thesis. My sincere appreciation is extended to the Royal Golden Jubilee (RGJ) advisors, who encouraged and gave me valuable knowledge.

A deep thank-you is also extended to Dr. Peter McQuillan for his kindness as well as the scientific knowledge and techniques he shared with me regarding Entomology and Ecology during my visit to his laboratory at the University of Tasmania. He is also the main person who checked both the ecological context and English in our presentations and papers. I also wish to thank his wife and children for their warm welcome and care given to me while I stayed in Tasmania.

The research for this Thesis would have been impossible without the help of people in the following organizations: The Biology Department of Chiang Mai University, Environmental Monitoring: Aquatic Insect Research Unit at Chiang Mai University (Thailand), School of Geology and Environmental Studies at the University of Tasmania (Australia) and Prof. Hans Malicky Privacy Laboratory (Austria).

Also individually I extended my great appreciation to:

Associate Professor Araya Jatisatienr for her advise and teaching of statistics, the information was of great help. Associate Professor Pongpor Asnachinda for kindly checking my Thesis. My geological knowledge is still at a beginner's level, thus his assistant was of great value. Assistant Professor Yanyong Inmuong for sacrificing his time to comment and make improvements on my Thesis. He is the first person who was recognized as the proficient external committee for this project. Dr. Werachai Nanakorn for his kindness in considering this projects proposal. Dr. Hans Malicky for his support and care while I was researching Trichoptera in Lunz Am See, Austria. Thank you for providing the laboratory facilities as well as reference articles and most importantly thank you for sharing your vast knowledge with me. I am indebted to his wife, Dr. Gudrun Malicky and family for offering me an unforgettable time in Austria. Catherine Young for helping to facilitate access to laboratory equipment and Geometidae literature at the School of Geography and Environmental Studies, University of Tasmania, Australia.

I wish to acknowledge individually the support of my colleagues: I am very appreciative Pongsak Luadee, Penkhae Thamsenanupap, Artit Nuntakwang, Jirayu Naewong, Nattaphorn Changthong for their assistance both academically and with everyday tasks necessary to complete this Thesis. Kanjana Saelim and Denchai Thapanya for helping out on many field trips.

Finally I wish to thank my beloved father and mother who have supported me both financial and morally during this study period.

My appreciation is extended to the scholarship support from the Royal Golden Jubilee (4.B.CM/43/B.1) and the Basic Research Grant (BGJ/25/2544) program from the Thailand Research Fund (TRF) and partly supported by the National Science Foundation (DEB-0103144). I would like to thank the National Research Council of Thailand (NRCT) and the Royal Forest Department of Thailand for granting permission to conduct this research.

Decha Thapanya
