

TABLE OF CONTENTS

	Page
ACKNOWLEDGEMENTS	iii
ABSTRACT (ENGLISH)	iv
ABSTRACT (THAI)	vi
TABLE OF CONTENTS	ix
LIST OF TABLES	xiii
LIST OF FIGURES	xvi
ABBREVIATIONS AND SYMBOLS	xviii
CHAPTER 1- INTRODUCTION	1
CHAPTER 2- LITERATURE REVIEW	3
Biological monitoring methods	3
Application of species diversity for biomonitoring	3
Application of phenotypic variability for biomonitoring	4
Plants in environmental research	4
Selection of plant species	6
Heavy metals	7
Heavy metal toxicity	8
Heavy metal uptake by plants	9
Role of hyperaccumulators in phytoremediation	11
Economic benefits of phytoremediation	12
Sources of lead contamination	12
Guidelines for lead contamination in soil	12

TABLE OF CONTENTS (continued)

	Page
Lead effects on human health	13
Lead effects on plants	14
Plant extraction and analysis	14
Microwave digestion	15
Atomic absorption spectrometry (AAS)	15
CHAPTER 3- MATERIALS AND METHODS	17
Materials	17
Chemicals	17
Other items	17
Apparatus	17
Plant species selection	18
Species selection criteria	18
Methods	19
Seed collection and preparation	19
Seed germination test	21
Seedling growth test	23
Lead analysis	28
CHAPTER 4- RESULTS	31
Seed germination test	31
Effects of lead treatments on germination rate	31
Effects of lead treatments on shoot elongation	34
Effects of lead treatments on root elongation	34

TABLE OF CONTENTS (continued)

	Page
Inhibitory effects of lead on germination	37
Seedling growth test	40
Effects of lead treatments on shoot length	40
Effects of lead treatments on leaf number	44
Effects of lead treatments on leaf length	47
Effects of lead treatments on biomass	48
Effects of lead treatments on FA	54
Inhibitory effects of lead on seedling growth	57
Lead analysis in plant tissues	62
Microwave digestion	62
Lead analysis	63
CHAPTER 5- DISCUSSION	68
Seed germination test	68
Inhibitory effects on seed germination	68
Percent DFC	68
Percent phytotoxicity of shoot elongation	69
Percent phytotoxicity of root elongation	69
Sensitivity of seed germination test parameters and indices	70
Germination tolerance	71
Seedling growth test	72
Inhibitory effects on seedling growth	72
Growth parameters	73

TABLE OF CONTENTS (continued)

	Page
Percent biomass dry weight	73
Relative biomass yields	74
Absolute FA	74
Sensitivity of seedling growth test parameters and indices	74
Ability of seedling growth	76
Determination of lead tolerance ability	77
Lead analysis	78
Lead concentrations in plant tissues	78
Lead uptake and translocation in plants	80
CHAPTER 6- CONCLUSIONS	83
CHAPTER 7- RECOMMENDATIONS	85
REFERENCES	87
APPENDICES	94
Appendix 1-- Voucher specimens	94
Appendix 2-- Results of repeated measures analyses of variance	101
Appendix 3-- Lead content in plant tissues	105
Appendix 4-- Correlation of lead in plant tissues and biomass weight	107
<i>CURRICULUM VITAE</i>	109

LIST OF TABLES

Table	Page
1 Class of plant-chemical tests	5
2 Plant phytotoxicity tests and their descriptions	5
3 Test plants recommended by the U. S. EPA, OECD, and U. S. FDA	6
4 Heavy metals stress in plants	9
5 Number of known heavy metals hyperaccumulator plants	11
6 Estimated cost of phytoremediation	12
7 Lead contamination in surface soils of eastern Europe	13
8 Guidelines for lead contamination in soil	13
9 Plant species tested	18
10 Seed collection data	19
11 Germination test conditions	22
12 Pb(NO ₃) ₂ spiked amount per pot	26
13 Seedling growth test conditions	26
14 Operation conditions in a microwave digestion system	29
15 Measuring conditions for AAS	30
16 Lead effects on seed germination rates	33
17 Lead effects on shoot elongation	34
18 Lead effects on root elongation	35
19 Percent DFC	37
20 Percent phytotoxicity for shoot length	38
21 Percent phytotoxicity for root length	38
22 Initial shoot length	40

LIST OF TABLES (continued)

Table	Page
23 RGR for shoot length	41
24 <i>P</i> values of repeated analysis of variances on shoot length	42
25 Numbers of leaves	44
26 <i>P</i> values of repeated analysis of variances on leaf number	45
27 Leaf length	47
28 Total dry biomass	48
29 Shoot biomass	49
30 Root biomass	50
31 FA differences before and after treatments	54
32 FA difference between lead treatments	54
33 Relative absolute FA	56
34 Inhibition percentage in the plants tested	58
35 Percent biomass dry weight	59
36 Relative percent dry biomass weight	60
37 Relative biomass yields	60
38 Percent recovery of lead extracted by microwave digestion	62
39 Absorbance of different concentration of lead by AAS	63
40 Precision test for analytical methods	64
41 Lead content in roots and shoots	64
42 Summary of multivariate tests for lead concentration in plant tissue	65
43 K values and TF	66

LIST OF TABLES (continued)

Table	Page
44 Ranking system of inhibition percentage	70
45 Comparison of germination test sensitivities	70
46 Tolerance and sensitivity according to % root phytotoxicity	71
47 Comparison of seedling growth test parameters for lead sensitivity	75
48 Comparison of plant ability in terms of relative yield	77
49 Sensitivity and tolerance orders	78
50 Cost estimates of herbaceous plant in phytoremediation program	86

LIST OF FIGURES

Figure	Page
1 Dose-response pattern for non essential and essential metals	8
2 The three different uptake characteristics of plants	10
3 Schematic diagram of flame atomic absorption instrumentation	16
4 Plant species tested	20
5 Experimental procedure	24
6 EC ₅₀ determination	28
7 Effects of lead on seed germination	32
8 Effects of lead on germination rates	33
9 Effects of lead on shoot and root elongation	36
10 Inhibitory effects of lead on seed germination	39
11 Effects of lead on shoot length	41
12 Shoot length plotted across time for all lead treatments	43
13 Effects of lead on leaf number	44
14 Leaf number plotted across time for all lead treatments	46
15 Effects of lead on leaf length	47
16 Effects of lead on total biomass	48
17 Relation of biomass weight of shoots and roots	51
18 Effects of lead on seedling growth	52
19 FA symptoms found in leaves in control and lead treated plants	55
20 Comparison of the effects of lead on changes in total biomass and FA	56
21 Lead phytotoxicity symptoms compared with control plants	57
22 Effects of lead on percent of dry biomass weights	59

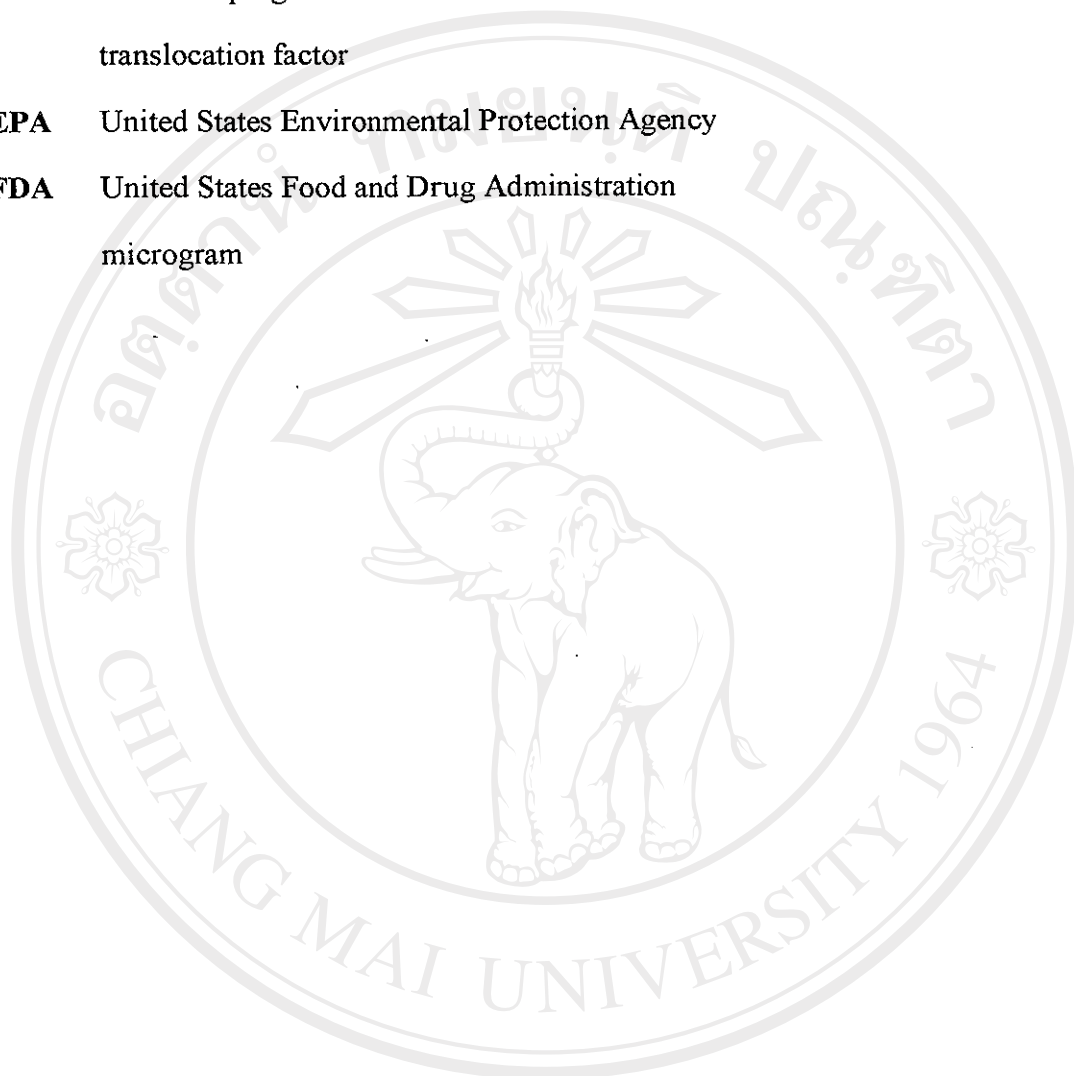

LIST OF FIGURES (continued)

Figure	Page
23 Correlation between relative yield and lead treatments	61
24 Calibration curve of lead standards	63
25 K value and TF	66
26 Comparison of tolerance and sensitivity in terms of % root phytotoxicity	72
27 Comparison of FA and two growth parameters indices	76
28 Comparison of tolerance and sensitivity in terms of relative yield	77
29 Lead content in sand and plant relationships	81

LIST OF ABBREVIATIONS AND SYMBOLS

AAS	atomic absorption spectroscopy
ANOVA	analysis of variance
C	control (0 µg/ml or 0 µg/g)
cm	centimeter
CV	coefficient of variation
DFC	different from control
EC₅₀	effective concentration for 50 % inhibition relative to control
FA	fluctuating asymmetry
g	gram
H	high lead treatment (500 µg/ml or 500 µg/g)
K	transfer coefficient
L	low lead treatment (100 µg/ml or 100 µg/g)
LSD	least significant difference
M	medium lead treatment (250 µg/ml or 250 µg/g)
mg	milligram
ml	milliliter
OECD	Organization for Economic Cooperation and Development
Pb	lead
ppm	parts per million
r²	coefficient of determination
RGR	relative growth rate
SD	standard deviation

SPSS	statistical program for social science
TF	translocation factor
U. S. EPA	United States Environmental Protection Agency
U. S. FDA	United States Food and Drug Administration
µg	microgram
