ACKNOWLEDGEMENTS

I would like to express my gratitude to the many individuals whose willingness to share their time and expertise helped me to bring this dissertation to fruition.

To Associate Professor Dr. Linchong Pothiban, my chair and academic advisor, for her thoughtful comments, constructive feedback, suggestions, patience and careful attention to details during the work of this dissertation. I would also like to extend my thanks to my co-advisors. To Associate Professor Dr. Basia Belza whose mentorship, guidance and critique honed my ability during my study at the School of Nursing, University of Washington, Seattle, and afterwards when I continued my dissertation in Thailand. Her valuable comments and suggestions are appreciated. To Assistant Professor Dr. Khanokporn Sucamvang and Dr. Sirirat Panuthai for their insightful suggestions and helpful guidance. I would also like to extend my most sincere thanks to my examining committee. To Professor Dr. Wichit Srisuphan for her practical guidance and valuable comments. Also, I gratefully acknowledge the thoughtful comments and suggestions offered by Professor Dr. Pranom Othaganont.

A very special thanks to Professor Dr. Phyllis Gendler, Kirkhof School of Nursing, Grand Valley State University, and to Professor Rita L. Ailinger, College of Nursing and Health Science, George Mason University, U.S.A, and to Dr. Noppawan Piaseu, School of Nursing Ramathibodi, Mahidol University for permission to use their instruments, and to Dr. Catherine Warms, School of Nursing, University of

Washington, Seattle for permission to modify her instrument. Special thanks to all experts, who have validated instruments used in this study. Also thanks to Professor Rajata Rajatanavin, Mahidol University, Thailand, Professor Robert Marcus, Stanford University, and Associate Professor Claire Peel, University of Alabama at Birmingham, for their expertise and scholarly guidance on the study of osteoporosis. My thanks to Associate Professor Dr. Mary K. Salazar at School of Nursing, University of Washington, Seattle, for her practical experience on the study of health behaviors. I am especially indebted to Dr. Thomas A. and Dorothy S. Gamble, my friends, who contributed their time and help in my dissertation writing.

A special recognition goes to the staffs who have guided my search for knowledge and academic experience during my study at the Faculty of Nursing, Chiang Mai University and School of Nursing, University of Washington at Seattle, U.S.A. Of specific help in support during my study has been the work of Associate Professor Siraya Summawart, Head, Division of Surgical Nursing, and the staffs of the Division of Surgical Nursing, Faculty of Medicine Ramathibodi Hospital, Mahidol University. Special thanks to Faculty of Nursing Chiang Mai University, which provided facilities during my data collection. Of course, I am especially grateful to the Ministry of University Affairs, which provided partial scholarship for my study; and to Graduate School, Chiang Mai University, which granted partial funding of my dissertation.

Specially, I wish to acknowledge my friends and colleagues. To Dr. Noppawan Piaseu and Dr. Tiraporn Junda, for their emotional and tangible supports during my study at School of Nursing, University of Washington at Seattle, to Nonglak

Wuddhipreecha and her family, for their help and warm welcome of my arrival and stay in Chiang Mai, and to my cohort study, especially Usanee Jintrawet and Mayulee Somrarnyart, and my friends for their emotional support.

Most importantly, this dissertation is dedicated to my family who have most closely been involved in the production of my dissertation. Especially my father, although he passed away, he constantly challenged my thinking, my beloved mother, who encourages me always to be more than who I think I am; my elder sister and elder brothers who support and encourage me, my beloved nephews and nieces, especially, Aucharapun, who surrounds me with love and happiness. To older adults who participated as subjects in this study.
