

OBJECTIVES

The purposes of this study were as follows:

1. To investigate and evaluate analgesic and anti-inflammatory activities of Chinese herbal recipe (DJW) in various animal models.
2. To verify the efficacy of this herbal recipe and to compare its efficacy versus diclofenac in symptomatic treatment of osteoarthritis of knee.
3. To initiate the multi-disciplinary cooperation with the attempt to set up the organization responsible for testing the efficacy, quality control and standardization of patent herbal medicines (ready-to-use herbal products).
