ACKNOWLEDGEMENTS

I would like to express my sincere gratitude to Assoc. Prof. Dr. Usanee Vinitketkumnuen, thesis advisor, for her valuable discussion, support and enthusiasm during this study.

I would like to express my gratitude to my co-advisor, Prof. Dr. Christopher P Wild, Head of the Molecular Epidemiology Unit, School of Medicine, University of Leeds, for his valuable and kind advice, and for providing in laboratory facilities and financial support during the extent of my stay in his laboratory. I would like to give special thanks to Dr. Elizabeth Smith for her excellent training in molecular biology and providing of laboratory equipment. I would like to thank Dr. Paul Turner and Dr. Laura Hardie for suggestions concerning immunological work. I would like to thank all staff at the Molecular Epidemiology Unit, School of Medicine, University of Leeds, for their kindness and friendship. To all those friends I have meet in Leeds, thanks for your support.

I would like to extend my gracious thanks to Assoc. Prof. Dr. Watchara Kasinrerak for his valuable suggestions and for providing me with the cell harvester and β -counter. I would also like to thank Dr. Sakorn Pornprasert for providing me some chemicals and reagents.

I would like to acknowledge the Royal Golden Jubilee (RGJ) scholarship for the financial support during study in Thailand and United Kingdom.

I would like to thank Mrs. Siriporn Thabutra for her kindly help with document preparation. I also would like to thanks Mrs. Junya Tipsri for her help in conducting *in vivo* study in mice and many thanks for my friends and collogues in the Department of Biochemistry, Faculty of medicine, Chiang Mai University for their kindness and friendship.

I would like to acknowledge Dr. Dale E Taneyhill for editing the English for this thesis and for his love and encouragement.

Finally, I would like to express my deepest appreciation to my parents, grandmother, and brother for their love and encouragement during this study.

Khanittha Punturee
