ACKNOWLEDGEMENTS

First, I wish to express my appreciation to Associate Professor Dr. Luksana Makonkawkeyoon, for her excellent guidance, valuable advice, interest in solving many problems, patience, and her constant encouragement through this study. Without her support, this thesis would not have been successful. I would like to extend my gracious thank to Dr. Wirote Tuntiwechapikul and Professor Dr. T. Randall Lee for their valuable suggestions and consultation in this thesis.

A special appreciation is also expressed to Associate Professor Sumalee Siriaungkul, MD. and Associate Professor Surapan Khunamornpong, MD., Department of Pathology, Faculty of Medicine, Chiang Mai University for their kind support with the tissue specimens and valuable advice throughout this study. Without their support and encouragement, this thesis could not have been completed.

This thesis would not have been a completed success without the assistance from my examining committees Associate Professor Dr. Porn-ngarm Limtrakul and Associate Professor Surang Triratanachat, MD. I am also thankful to all staff members in the Department of Biochemistry, Faculty of Medicine, Chiang Mai University who have always provided me with valuable advice and assistance when needed.

I would like to thank Mr. Somphon Phraephan, Mr. Suparp Chaidatch, Mr. Pahol Sansomchai and Mr. Tanachai Taka for their instruction, training, friendship, and their generous help during this study.

I also need to express special acknowledgement to Faculty of Medicine for the financial support provided by Endowment Fund for Medical Research, Chiang Mai University, Thailand during the study.

Finally, I am especially grateful to my parents and sister for their love, understanding, pushing, kindly encouragement and support throughout my life.

Worakarn Wongchankham
