ACKNOWLEDGEMENT

I would like to express my sincere gratitude and appreciation to Assoc. Prof. Dr. Daoroong Kangwanpong, my thesis advisor who has given me the chance to further this study and for her valuable advice, kindness, supervision and encouragement. I am also grateful to Assoc. Prof. Dr. Thipmani Paratasilpin, a co-advisor for her valuable suggestion, discussion and correction for this dissertation.

Furthermore, I would like to thank to Prof. Voranunt Suphiphat from Medical Research Unit, Ramathibodi Hospital, Mahidol University and also Assoc. Dr. Usanee Vinitketkumnuen and Assoc. Dr. Umnat Mevatee from Department of Biochemistry and Department of Anatomy, Faculty of Medicine, Chiang Mai University for their valuable comments and suggestions.

In particular, my appreciation and grateful thank are to Prof. Dr. Günter Speit and all his colleagues in the Department of Human Genetics, University of Ulm, Germany, for his helpful cooperation, introduction to the comet technique, statistical analysis, reading and revision of the manuscripts. I also especially thank to Ms. Petra Schütz, for her excellent technical assistance during the experiment in comet assay.

This study could not be successful without the participations of the subjects residing in Saraphi and Chom Thong districts, Chiang Mai, Thailand and also of the government officers in the Ministry of Public Health of both districts. This work was financially supported by the Royal Golden Jubilee (grant contract No. PHD/069/2543), Thailand Research Fund (grant contract No. BGJ/40/2543) and DAAD (grant contract No. A/02/09887).

Finally but most important, I would like to express my deepest gratitude and appreciation to my parents and sisters for their loves, patience, understanding and kindly continuous supports throughout my study.

Worapa Heepchantree
