CHAPTER 1 INTRODUCTION	1
1.1 Overview	1
1.2 Bone alkaline phosphatase	4
1.2.1 Bone alkaline phosphatase	4
1.2.2 Methodology for determination of bone alkaline phosphatase	6
1.2.2.1 Heat inactivation	6
1.2.2.2 Chemical inhibition	7
1.2.2.3 Electrophoresis	8
1.2.2.4 Chromatographic technique	9
1.2.2.5 Immunoassay	9
1.2.2.6 Lectin precipitation	11
1.3 Wheat germ lectin	11
1.4 Flow injection-bead injection for determination of bone ALP	13
1.5 Research objectives	16

CHAPTER 2 EXPERINENTAL 17

2.1 Materials and apparatus 17

2.2 Reagents 17

2.3 Preparation of standard solutions and reagents 18

2.4 Bead retention cell 20

2.5 Manifold and operation steps 22

2.6 Opimization 25

2.6.1 Sample volume 25

2.6.2 Flow rate 26

2.6.3 Bead loading time 26

2.6.4 Processing time 26

2.7 Within-run precision 28

2.8 Between-run precision 28

2.9 Calibration curve 28

2.10 Cross-reactivity with liver ALP 28

2.11 Testing of accuracy 29

2.12 Dilution of serum sample 29

2.13 Application of developing FI-BI technique for real serum samples 29

2.14 Comparison of the FI-BI system with ELISA kit 30

CHAPTER 3 RESULTS AND DISCUSSION 31

3.1 Bead retention cell designs 31

3.2 Manifold and operation step 32

3.3 Optimization 33

3.3.1 Sample volume 33

3.3.2 Flow rate 35

3.3.3 Bead loading time 36

3.3.4 Processing time 37

3.4 Optimum condition of the FI-BI system 42

3.5 Within-run precision 43

3.6 Between-run precision 44

3.7 Calibration curve 45

3.8 Cross-reactivity with liver ALP 48

3.9 Testing of accuracy 49

3.10 Dilution of serum sample 50

3.11 Determination of bone ALP in serum samples using the system 52

CHAPTER 4 CONCLUSION 58

4.1 Conclusion 58

4.2 Further works 59

THE RELEVANCY OF THE RESEARCH WORK TO THAILAND 60

REFFERENCES 61

APPENDICES 64

Appendix A 65

Appendix B 66

Appendix C 74

Appendix D 76

Appendix E 84

LIST OF TABLES

TABLE		PAGE
1.1	Total ALP and bone ALP activities in various groups of subjects	6
1.2	Relationship of incubation time and temperature was used in heat inactivation	7
1.3	Immunoassay method for bone alkaline phosphatase	10
3.1	Operation time for determination of bone ALP by using FI-BI system	42
3.2	The optimum condition of the FI-BI system for determination of bone ALP in human serum samples	43
3.3	Within-run precision of the FI-BI system obtained from 10 injections of a fetal bovine serum in one day	44
3.4	Between-run precision of the FI-BI system obtained from 10 runs of a fetal bovine serum in 10 days	45
3.5	Cross-reactivity of liver ALP with bone ALP assay	49
3.6	Percent difference of spiked bone ALP in normal serum sample	50
3.7	Testing of accuracy of spiked bone ALP in normal serum samples	51
4.1	The comparison of the FI-BI assay with commercial ELISA kit	59

LIST OF FIGURES

FIGURE		PAGE
1.1	Composition of wheat seed	3
1.2	Separation of serum samples containing bone (B) and liver (L) ALP isoforms by affinity electrophoresis with wheat-germ lectin and by conventional electrophoresis	8
1.3	Serum ALP isoform profiles from a healty male (A) and a prostate cancer patient with bone metastases (B)	9
1.4	Lectin mediated interactions	12
1.5	3 D structure model of wheat germ agglutinin	13
1.6	A simple FIA manifold with a typical recorded output as obtained from a flow-through detector	14
1.7	Beads material for supporting media	15
2.1	A schematic diagram of the bead retention cell	20
2.2	A schematic diagram of the bead retention cell made from Perspex glass	21
2.3	A schematic diagram of beads retention and beads rejection by a solenoid valve	22
2.4	The enzyme-substrate reaction of bone alkaline phosphatase with p-nitrophenyl phosphate	23
2.5	The FI-BI system for the determination of bone alkaline phosphatase	24

2.6 p-nitrophenol obtained from auto-oxidation of p-nitrophenyl phosphate 27

3.1 A micro column 31

3.2 Effect of the sample volume on analytical signal 34

3.3 Effect of the buffer flow rate (P_1) on the analytical signal 35

3.4 Effect of the bead loading time on the analytical signal 36

3.5 Effect of the wheat germ lectin beads conditioning time on the analytical signal 37

3.6 Effect of incubation time of wheat germ lectin with bone ALP on the analytical signal 39

3.7 Effect of the Tris-HCl buffer pH 9.5 flowing time on the analytical signal 40

3.8 The washing profile at various flowing times of the Tris-HCl buffer pH 9.5 40

3.9 Effect of incubation time of bone ALP with p-nitrophenyl phosphate on the analytical signal 41

3.10 Analytical signal profile of standard bone ALP of various concentrations 46

3.11 Calibration curve of the bone ALP activities 47

3.12 The method comparison between FI-BI and commercial ELISA kit 53

3.13 The ratio of bone ALP: total ALP in normal serum samples and abnormal serum samples were obtained from the FI-BI assay and commercial ELISA kit 55
