### **Acknowledgements**

Special thanks are given to Dr. Stephen Elliott, my thesis advisor, for his valuable guidance provided for my experimental work in the greenhouse at Chiang Mai University, to Dr. Sunanta Wangkarn, my thesis co-advisor, for her kind advice on chemical analysis techniques, to Dr. Jesada Luangjame, my thesis co-advisor, for his assistance in plant impact analysis techniques, and to Dr. Sutthatorn Suwanaratana, my general advisor, for her kindness in all assistance.

I am very grateful to Dr. Supat Wangwonwatana, Deputy Director-General of the Pollution Control Department, for not only giving me an opportunity to do my graduate study at Chiang Mai University but also for allowing me to do chemical analysis at the laboratory of the Pollution Control Department.

My deep appreciation is also given to Dr. Chitchol Phalaraksh and students of the Environmental Science Program for their help in planting and watering plants in the greenhouse and continuous support during my study at the Chiang Mai University.

Most importantly, it would not be possible for me to have completed my study without supporting and encouragement from my beloved parents, brother, sister, and friends.

Kanjana Suaysom
