ACKNOWLEDGEMENTS	iii
บทคัดย่อ	iv
ABSTRACT	vi
LIST OF TABLES	x
LIST OF ILLUSTRATIONS	xii
CHAPTER 1 INTRODUCTION	1
1.1 Location of the study area	1
1.2 Purpose and scope	1
1.3 Previous investigations	4
CHAPTER 2 HYDROGEOLOGIC ENVIRONMENT	7
2.1 Topography	7
2.2 Climate	7
2.2.1 Rainfall	10
2.2.2 Temperature, relative humidity, and evaporation	10
2.3 Hydrology	10
2.4 Geology	13
2.5 Land use	13
2.6 Type of soil	13
CHAPTER 3 HYDROGEOLOGIC CHARACTERISTIC	18
3.1 Hydrogeologic unit	18
3.1.1 Lithologic log	18
3.1.2 Resistivity surveys	24
3.1.3 Integrated interpretation	30
3.2 Hydraulic properties	32
3.3 Groundwater flow pattern	35

CHAPTER 4 GROUNDWATER QUALITY	39
4.1 Groundwater chemistry	39
4.1.1 Physical characteristics	44
4.1.2 Cation concentration	46
4.1.3 Anion concentration	48
4.2 Hydrochemical facies	49
4.3 Relation of groundwater quality to uses	52
4.3.1 Domestic use	52
4.3.2 Agricultural use	57
CHAPTER 5 GROUNDWATER POTENTIAL AND RECHARGE	65
5.1 Hydrologic budget	65
5.1.1 Precipitation	67
5.1.2 Evapotranspiration	67
5.1.3 Infiltration and runoff	69
5.2 Groundwater recharge pattern and potential	71
5.2.1 Groundwater recharge pattern	71
5.2.2 Groundwater potential	71
5.3 Combination of Geographic Information System, Database, and Permeability Testing	74
CHAPTER 6 CONCLUSION AND DISCUSSION	86
REFERENCE	89
APPENDIX	92
Appendix A Lithologic log data	93
Appendix B Resistivity data	102
Appendix B1 Resistivity field data	103
Appendix B2 Resistivity model data	108
Appendix B3 Resistivity interpretation data	117
Appendix C Pumping test data	122
Appendix C1 Pumping test data	123
Appendix C2 Pumping test analytical data	127
VITA	131

LIST OF TABLES

Table	page
1.1 Details of groundwater wells in the study area.	3
2.1 Climatological data of Chachoengsao period 15 years (1989-2004).	9
2.2 Bang Pakong hydrological data monthly report in 2000.	12
2.3 Soil classification in the study area and its adjacent.	17
3.1 Locations of well with lithologic logs.	20
3.2 Resistivity survey location.	27
3.3 The correlation of resistivity with lithologic log in the study area.	30
3.4 Hydraulic properties as interpreted from pumping test data analysis.	36
3.5 Groundwater level in the study area and its adjacent.	37
4.1 Groundwater sampling location.	41
4.2 Analytical data of groundwater samples.	42
4.3 Groundwater classification based on total dissolved solids.	47
4.4 Groundwater classification based on total hardness.	47
4.5 Hydrochemical facies of groundwater samples.	50
4.6 Drinking water quality standards of Thailand.	53
4.7 Groundwater quality standards for drinking purpose.	54
4.8 The permissible limits prescribed by WHO for drinking purposes and the resulting undesirable effect on human system.	55
4.9 Process for effective removal of drinking water contamination.	55
4.10 Water classification for sodium percentage.	60
4.11 Suitability of groundwater for agricultural use based on sodium percentage in the study area and its adjacent.	60
4.12 Water classification for the sodium adsorption ratio (SAR).	61
4.13 The sodium adsorption ratio (SAR) of groundwater sample in the study area and its adjacent.	61
5.1 Correction factor depend on the latitude and month.	70
5.2 Potential evapotranspiration (PET) of the study area, using	70

Thornthwaite method.	
5.3 Groundwater abstraction in the study area.	72
5.4 Calculation of effective rainfall in the study area (period 1989-2004).	72
5.5 Field data of the permeability test in the study area.	79
5.6 Hydraulic conductivity in the study area.	79
5.7 The U.S. Soil Conservation Services infiltration rate.	80
5.8 The hydrologic soil group in the study area.	80
5.9 Relationship between slope gradient, overland flow, and infiltration.	82

LIST OF ILLUSTRATIONS

Figure	Page
1.1 Location of the Bang Khla Royal Development Project.	2
1.2 Map of groundwater availability in the study area and its vicinity.	6
2.1 Topography in the study area and its vicinity.	8
2.2 Hydrology in the vicinity of the study area.	11
2.3 Geology in the study area.	14
2.4 Land use in the study area in accordance with the New Theory of Agriculture Project.	15
2.5 Type of soil in the study area and its vicinity.	16
3.1 Location of lithologic log in the study area and its adjacent.	19
3.2 Hydrogeologic cross-section line A-A'.	21
3.3 Hydrogeologic cross-section line B-B'.	22
3.4 Hydrogeologic cross-section line C-C'.	23
3.5 Electrical circuits for resistivity determination and electrical field for resistivity survey.	26
3.6 The range of resistivity values of common material.	26
3.7 Schlumberger electrode array.	26
3.8 Location of resistivity survey in the study area.	28
3.9 Resistivity survey in the study area.	29
3.10 Vertical electrical sounding curves using model.	29
3.11 Integrated interpretation of lithologic logs and resistivity surveys.	31
3.12 Location of pumping test well in the study area.	33
3.13 Pumping test data analysis using Theis and Cooper & Jacob method.	34
3.14 Flow net in two dimensional approximation.	36
3.15 Groundwater flow pattern in the study area and its adjacent.	38
4.1 Groundwater sampling location.	40
4.2 Stiff diagram in the study area and its adjacent.	45
4.3 Hydrochemical facies using Piper diagram.	50

4.4	Hydrochemical facies of groundwater in the study and its adjacent area.	51
4.5	Total dissolved solids concentration in the study area and its adjacent.	56
4.6	Distribution map of chloride in the study area and its adjacent.	58
4.7	Classification of irrigation water based on SAR and conductivity using Wilcox diagram.	64
5.1	Component of the hydrologic cycle.	68
5.2	Monthly distribution of average annual rainfall of the study area, period 1989-2004.	68
5.3	Average monthly rainfall, evapotranspiration, soil moisture deficits, and effective rainfall in the study area (period 1989-2004).	73
5.4	The location of permeability test in the study area.	76
5.5	The permeability test in the field.	78
5.6	Field permeability test method.	78
5.7	The hydrologic soil map.	81
5.8	The permeability value map of the study area.	84
5.9	The potential recharge map.	85
