## ACKNOWLEDGEMENT

I am deeply indebted to my thesis supervisors, Assoc. Prof. Dr. Boonsom Liawruangrath, Department of Pharmaceutical Sciences, Faculty of Pharmacy, Chiang Mai University, Thailand and Prof. Dr. John B. Bremner, Department of Chemistry, Faculty of Science, the University of Wollongong, Australia for their concern, encouragement and valuable advice throughout my period of study.

I am very grateful to Assoc. Prof. Dr. Amphawan Apisariyakul, Assoc. Prof. Dr. Saisunee Liawruangrath, Dr. Apiwat Baramree and Dr. Khanit Suwanborirux, the thesis committee, for the valuable suggestions and corrections.

I would like to thank the Thailand Research Foundation for the award of the Royal Golden Jubilee Ph.D. Scholarship and Naresuan University for granting my partial financial support to conduct this research.

I would like to thank the scientists of the BIOTEC, Thailand for the measurement of some bioassays including anti-herpes simplex virus, antimalarial, anti-inflammatory, cytotoxicity and antituberculosis activities. I also thank Prof. A.H. White, University of Western Australia, for the single crystal X-ray structure.

I would like to give my sincere thanks to the following people who extended their kind aid in completing this work: Dr. John Korth and Larry Hick for operating the Low and High Resolution Chemical Ionization/Electron Impact Mass Spectrometers; Sandra Chapman and Ellen Manning for their assistance in training me in using the NMR spectrometer; my fellow members of the Liawruangrath and Bremner research groups for their company and my best friends in the Bremner research group : Colette, Susan, Surya, Johana, Waya and Siritron for their uncountable help and friendship.

Finally, I wish to express my infinite gratitude to my parents, my wife and my lovely daughters for their love, understanding and encouragement.
