TO MY LORD AND HIS WORD

*'The Lord will guide you always; he will satisfy your needs in a sun-scorched land and will strengthen your frame. You will be like a well-watered garden, like a spring whose waters never fail..... Isaiah 58:11*

## ACKNOWLEDGEMENTS

As with most new studies this study depended on having good cooperation with others. Cooperation between the Faculty of Pharmaceutical and Health Sciences, Mahasarakham University and Mahasarakham Hospital was developed during the pilot project. I wish now to express my sincere appreciation to the many talented people who helped in this way in both institutions.

First and foremost of my advisors, I wish to express my deepest thanks to Professor Dr. RME Richards who was dean of the Faculty of Pharmaceutical and Health Science, Mahasarakham University. He gave many thoughtful ideas, provided a very rapid response as a first priority to all my communications and edited my English language for producing publications and the thesis. He also supported and took care of every step of this study from the beginning to the end. In addition, thank you very much for taking care of and encouraging my Christian life always throughout the time of being your supervisee. My gratitude also goes to Associate Professor, Dr. rer. nat Jaratbhan Sanguansermisri who was dean of the Faculty of Pharmacy, Chiang Mai University, for providing very much support and helpful advice during the 4 year research based Ph.D. course of Chiang Mai University, being a consultant during the data collection time and always reminding me about ethical issues. And I am grateful to Dr. Chai Teerasut, director of Mahasarakham Hospital, who made it possible to undertake the project, especially by allowing me to use hypertensive patients from primary care units subcontracted to Mahasarakham Hospital and to access patients' medical history in the hospital data base. Without him, this study would be impossible.

I would also like to thank Assistant Professor, Dr. Sunantha Osiri, a lecturer at the Faculty of Pharmaceutical and Health Sciences, Mahasarakham University for supporting this project in many ways, especially in the beginning. Dr. Summana Moolsarn, a lecturer at the Faculty of Pharmacy, Ubonratchathani province, for helpful consultations on statistics. Dr. Watcharee Leurmarnkul, a lecturer at the Faculty of Pharmacy, Silpakorn University, for very useful advice on quality of life evaluation. Dr. Wararat Nilward, a lecturer at the Faculty of Pharmacy, Chiang Mai University, for providing basic guidance on undertaking research. I would also like to thank all the staff and members of the Faculty of Pharmaceutical and Health Sciences, and the Faculty of Education, Mahasarakham University, all staff in Mahasarakham Hospital, and at Takornyang and Khamrieng primary care units, many lecturers in the Faculty of Pharmacy, Chiang Mai University, 4 Pharm.D. students, Ms. Wilavan Ardvichai, Mr. Khuanchai Bunrakchai, Mr. Somkid Janeklang and Panuvit Srisaena, and my sisters, Mrs. Sonthitip Polchumni and Ms. Ratchanee Polchumni, who are nurses and helped with interviews, and my friends for their support and encouragement.

As part of the Ph.D. program in the School of Pharmacy, the Robert Gordon University, Aberdeen, Scotland, extra thanks for the very useful advice in statistics from Dr. Alex Wilson, School of Computing, and services provided under the supervision of Dr. Terry Healey, the Head of the School.

I am indebted also to the Graduate school, Chiang Mai University, and the Human Systems Research Institute of Thailand for the funding which provided for the costs of this project.

Finally, this time of writing would not have been possible without the support of my family and the encouragement I have received from studying the Bible.

Phayom Sookaneknun
