LIST OF TABLES

Table	Page
1. Composition of experimental diets	13
2. Effects of dietary fat on body weight	21
3. Effects of dietary fat on lipid profiles	22
4. Effects of dietary fat on the tissue glycogen and triacylglycerol storage	25
5. Effects of dietary fat on tissue glycogen concentration after exercise test	27
6. Effects of dietary fat on tissue triacylglycerol concentration after exercise test	29
7. Effects of dietary fat on tissue glycogen utilization after endurance exercise	32
8. Effects of dietary fat on tissue triacylglycerol utilization after endurance exercise	33
9. Effects of dietary fat on enzymatic activity	36
10. Effects of dietary fat on blood born substrates	38

LIST OF ILLUSTRATIONS

Figure	Page
1 Effects of dietary fat on endurance time among the normal fat diet (NF), moderate fat diet (MF) and high fat diet (HF) groups	23
2 Comparison of glycogen and triacylglycerol concentrations in muscle and liver among the normal fat diet (NF), moderate fat diet (MF) and high fat diet (HF) groups	26
3 Comparison of dietary fat on total tissue utilization after exercise test among the normal fat diet (NF), moderate fat diet (MF) and high fat diet (HF) groups	30
4 Comparison of dietary fat on total tissue utilization after endurance exercise among the normal fat diet (NF), moderate fat diet (MF) and high fat diet (HF) groups	34
