ACKNOWLEDGEMENT

I am extremely indebted to the valuable advice and the most kind encouragement of Assistant Professor Dr. Anchalee Pongchaidecha, my advisor and Chairman of Department of Physiology, who afforded the opportunity of my education and provided the continuous useful guidance throughout the period of my graduate study. I am also deeply grateful to my co-advisor, Assistant Professor Dr. Orawan Wongmekiat and Lecturer Dr. Udompun Khansuwan for their helpful advice, comments, continuous encouragement, understanding and valuable suggestions of this thesis.

I wish to express my profound gratitude to all members of the supervisory graduate committee for suggestions of this thesis.

I am also particularly thankful to Mr. Thongkum Taya, Clinical Chemistry Laboratory, Central Diagnostic Laboratory, Maharaj Nakorn Chiang Mai hospital for his kindness and valuable advice.

My special thanks to Mr. Anant Yavinung, for helping and co-operation in this experiment.

I would like to thank all the instructors in the department of Physiology, Faculty of Medicine, Chiang Mai University for their teaching and suggestion during the cause work which were greatly helpful in completing my graduate study.

This study was granted by the Faculty of Medicine Endowment Fund for Medical Research. Therefore, the author would like to express sincerely thanks for valuable support here.

Finally, I wish to express my profound gratitude and appreciation to my family for their love, generous standing and loving support throughout my life.
