<b>ACKOWLEDGMENT</b>	iii
<b>ENGLISH ABSTRACT</b>	v
<b>THAI ABSTRACT</b>	vii
<b>LIST OF TABLES</b>	xii
<b>LIST OF ILLUSTRATIONS</b>	xiii
<b>ABBREVIATIONS AND SYMBOLS</b>	xv
<b>CHAPTER I. INTRODUCTION</b>	
1.1 STATEMENT OF THIS PROMBLEMS	1
1.2 LITERATURE REVIEW	3
1.2.1 Hyaluronan	3
1.2.2 Structure of Hyaluronan	3
1.2.3 Hyaluronan and Hyaluronan Binding Protein in Cartilage	5
1.2.4 Hyaluronan Synthesis	13
1.2.5 Turnover and Catabolism of Hyaluronan	14
1.2.6 Physiological and Biological Function of Hyaluronan	17
1.2.7 Cancer and Metastasis	18
1.2.8 Role of Hyaluronan in Cancer Progression	20
1.2.9 Elevation of Hyaluronan in Cancer Disease	24
1.2.10 Measurement of Hyaluronan	26
1.3 OBJECTIVES OF THIS STUDY	27
<b>CHAPTER II. MATERIALS AND METHODS</b>	
2.1 MATERIAL	
2.11 Reagents Used in This Study and Their Sources	28
2.1.2 Lists of The Antibodies Used in This Study	29

2.1.3 Experimental Instruments	29
2.1.4 Study Subjects	29
<b>2.2 Experimental Procedure</b>	
2.2.1 Proteoglycan Preparation	29
2.2.2 Hyaluronan Binding Protein Preparation	30
2.2.2.1 Preparation of HA-Sepharose Column	30
2.2.2.2 Isolation and Purification of HABPs	33
2.2.3 FITC Conjugation of HABPs	37
2.2.4 Preparation of FITC Conjugated HABP (FITC-HABP)	37
2.2.5 Histochemical Staining	39
2.2.6 Competitive Fluorescence-ELISA Based Assay	41
2.2.6.1 Optimization of Competitive ELISA Condition for FITC-HABP	41
2.2.7 Competitive Fluorescence-ELISA Based Assay for HA Determination in Cancer Serum	41
2.2.8 Analytical Procedure	
2.2.8.1 Bradford Assay	44
2.2.8.2 Electrophoresis	44
2.2.9 Evaluation for Accuracy and Precision of The Developed Method	
2.2.9.1 Intra Assay and Inter Assay Variation	44
2.2.9.2 Recovery of Serum HABPs	45
2.2.10 Statistical Method	
2.2.10.1 Percentage Inhibition	45
2.2.10.2 Serum HA Concentration	45
2.2.10.3 Rf Value of Protein and Marker Dye	46
<b>CHAPTER III. RESULT</b>	
3.1 Isolation and Purification of Hyaluronan-Binding Proteins	47
3.2 FITC Conjugation of HABPs	52
3.3 Histochemical Study	53

3.4 Competitive Fluorescence-ELISA	56
3.5 Optimal Dilution of FITC-HABP with Fluorescence-ELISA Based Assay	57
3.6 The Precision and Accuracy of HABPs Measurement	58
3.7 Application of FITC-HABP for HA Determination in Cancer Serum	62
<b>CHAPTER IV DISCUSSION</b>	65
<b>CHAPTER V CONCLUSION</b>	69
<b>REFERENCE</b>	70
<b>APPENDIX</b>	77
<b>CURRICULUM VITAE</b>	84

### LIST OF TABLES

Table	Page
1. Isolation and purification of HABPs from chicken cartilage	48
2. Intra- and interassay coefficient of variation for serum hyaluronan (HA) determination	59
3. Recovery of hyaluronan added to serum	59
4. Comparison of different methods for hyaluronan determination	60
5. Serum hyaluronan concentration in normal subjects and cancer patients	62

## LIST OF ILLUSTRATIONS

<b>Figure</b>		<b>Page</b>
1. Hyaluronan structure		4
2. Aggrecan function in cartilage		5
3. Simple structure of proteoglycan aggregate		6
4. Structure of aggrecan		7
5. The modular organization of the hyaluronan binding proteins		9
6. The folds of the link module		10
7. The Link module superfamily		11
8. Hyaladherin (or HABP) family of proteins		12
9. Hyaluronan biosynthesis		13
10. The putative scheme for HA catabolism		15
11. Diagram of a putative metabolic scheme for hyaluronan degradation		16
12. Pathogenesis of hematogenous metastasis		19
13. The model for hyaluronan-CD44 specific signaling pathways		22
14. The model for hyaluronan-RHAMM mediated signaling pathways		23
15. Elevated hyaluronan in primary prostate tumors		25
16. Diagram of HA-Sepharose column preparation		31
17. Carbodiimides reaction		32
18. Principles of proteoglycan preparation		33
19. Trypsin digestion		34
20. Procedures for the isolation of HABPs from cartilage		35
21. Principle of HABPs purification by affinity column chromatography		36
22. FITC conjugation		38
23. Hyaluronidase digestion		40
24. Diagram of the fluorescence-ELISA method		42
25. Principle of the fluorescence-ELISA based assay		43

26. The chromatography purification of HABPs	49
27. HABPs from chicken and marker proteins	50
28. Standard curve of molecular weight protein marker	51
29. FITC-HABP profile	52
30. Fibroblast cells (a) and control cells (b) stained with FITC-HABP	53
31. Chondrocyte cells (a) and control cells (b) stained with FITC-HABP	54
32. Rat skin tissue sections (a) and control sections (b) stained with FITC-HABP	55
33. Standard curve of competitive fluorescence-based assay	56
34. The optimal dilution of FITC-HABP	57
35. Correlation graph	61
36. The serum hyaluronan concentration in normal subjects and cancer patients	63
37. The serum hyaluronan concentration in normal subjects, cervical cancer, CEA positive and other cancer patients	64
38. Diagram steps of the conventional ELISA method	82
39. Principle of the conventional ELISA assay	83

## ABBREVIATIONS AND SYMBOLS

BSA	bovine serum albumin
B-HABP	biotinylated HABP
BRAL1	brain specific link protein 1
°C	degree Celcius
DMEM	Dulbecco/Vogt Modified Eagle's Minimal Essential Medium
EDAC (or EDC)	1-ethyl-3-(3-dimethylamino-propyl) carbodiimine
ELISA	enzyme-linked immunosorbent assay
g	gram
GAGs	glycosaminoglycans
GuHCl	guanidine hydrochloride
h	hour
HA	hyaluronan
HABPs	hyaluronan binding proteins
HAS	hyaluronan synthase
HYAL	hyaluronidase
IHABP	intracellular HABP
IgM	immunoglobulin M
kDa	kilodalton
L	liter
LYVE-1	lymph vessel endothelium
M	molarity
min	minute
ml	milliliter
mg	milligram
MMP	matrix metalloproteinase
MT-MMP	Membrane-type matrix metalloproteinase

MW	molecular weight
n	number
NaCl	sodium chloride
NaHCO <sub>3</sub>	sodium bicarbonate
ng	nanogram
OPD	O-phenylenediamine
PAGE	polyacrylamide gel electrophoresis
PBS	phosphate buffer saline
PGs	proteoglycans
PTR	proteoglycan tandem repeat
r	correlation coefficient
RHAMM	receptor for HA-mediate motility
RIA	radioimmunoassay
SD	standard deviation
TEMED	<i>N,N,N',N'</i> -tetra-methyl-ethylenediamine
temp	temperature
TRFIA	time-resolved fluoroimmunoassays
TSG-6	tumor necrosis factor stimulated gene-6
Tween 20	polyoxyethylene sorbitan monolaurate
$\mu$ g	microgram
$\mu$ l	microliter
v/v	volume by volume
w/v	weight by volume
w/w	weight by weight
