Acknowledgements	iii
Abstract (English)	v
Abstract (Thai)	viii
List of tables	xvi
List of illustrations	xviii
Abbreviations and symbols	xxiii
Chapter 1 General introduction	1
Chapter 2 Literature review	
2.1 Definition, distribution and habitats of <i>Dracaena lourieri</i> and <i>Pandanus</i> spp.	5
2.2 Importance of <i>Dracaena lourieri</i> and <i>Pandanus</i> spp.	6
2.3 Fungal life strategies (endophytes, parasites and saprobes)	8
2.4 Fungal classification	10
2.5 Ecology and distribution of fungi	10
2.6 Fungal succession	14
2.7 Importance of fungi	15
2.8 Fungi on Pandanaceae and fungi worldwide	16
2.9 Fungi in Thailand	19
2.10 Phylogenetic relationships of fungi	23
Chapter 3 Saprobiic and pathogenic fungi on <i>Dracaena</i> and <i>Pandanus</i>	
3.1 Introduction	27

TABLE OF CONTENTS (CONTINUED)

	Page
3.2 Materials and methods	27
3.2.1 Diversity and ecology of saprobic fungi on <i>Dracaena</i> and <i>Pandanus</i>	27
3.2.2 Fungal succession on <i>Pandanus penetrans</i> leaves	28
3.2.3 Pathogenic fungi on <i>Dracaena</i> and <i>Pandanus</i> leaves	30
3.3 Results	31
3.3.1 Diversity and ecology of saprobes	31
3.3.1A Determination of sample size	31
3.3.1B Fungal taxonomic composition	32
3.3.1C Effect of hosts and their habitats on fungal communities	38
3.3.1D Fungal occurrence on <i>Pandanus penetrans</i> leaves from different sites and the effect of the stage of decayed	40
3.3.1E Fungal occurrence on different parts of <i>Pandanus</i> <i>odoratissimus</i> and <i>P. penetrans</i>	41
3.3.1F Seasonal pattern of fungal occurrences on <i>Pandanus</i> <i>penetrans</i> leaves	42
3.3.2 Fungal succession on <i>Pandanus penetrans</i> leaves	44
3.3.2A Determination of sample size	44
3.3.2B Fungal taxonomic composition on <i>Pandanus penetrans</i> leaves and effect of stages of decay	44
3.3.3 Pathogenic fungi on <i>Dracaena</i> and <i>Pandanus</i> leaves	51
3.3.3A Collection of <i>Dracaena</i> and <i>Pandanus</i> diseases	51
3.3.3B Pathogenicity tests	60
3.4 Discussion	63
3.4.1 Bioiversity of saprobic fungi on <i>Dracaena loureiri</i> and <i>Pandanus</i> spp.	63
3.4.2 Fungal occurrence on different tissues of <i>Pandanus odoratissimus</i> and <i>P. penetrans</i>	66
3.4.3 Seasonal pattern of fungi on <i>Pandanus penetrans</i>	66

TABLE OF CONTENTS (CONTINUED)

	Page
3.4.4 Fungal succession on <i>Pandanus penetrans</i> leaves	67
3.4.5 Pathogenic fungi on leaves of <i>Dracaena lourieri</i> and <i>Pandanus</i> spp.	68
Chapter 4 Saprobic and pathogenic fungi on <i>Dracaena</i> and <i>Pandanus</i>	
4.1 Introduction	69
4.2 Descriptions and photographic figures of anamorphic fungi	70
<i>Canalisporium</i>	70
<i>Dictyochoeta</i>	73
<i>Ellisembia</i>	75
<i>Exerohilum</i>	76
<i>Memmoniella</i>	78
<i>Myrothecium</i>	80
<i>Paecilomyces</i>	83
<i>Periconia</i>	85
<i>Periconiella</i>	88
<i>Phaeostalagmus</i>	89
<i>Phialocephala</i>	91
<i>Sporidesmium</i>	93
<i>Stachybotrys</i>	94
<i>Trichothecium</i>	98
<i>Veronaea</i>	99
<i>Zygosporium</i>	101

TABLE OF CONTENTS (CONTINUED)

	Page
4.3 Descriptions and photographic figures of Ascomycetes	107
<i>Astrosphaeriella</i> (Melanommataceae: Dothideales)	107
<i>Chaetosphaeria</i> (Chaetomiaceae: Sordariales)	109
<i>Emericella</i> (Trichocomaceae: Eurotiales)	111
<i>Linocarpon</i> (Hyponectriaceae: Incertae Sedis)	112
<i>Melanochaeta</i> (Chaetosphaeriaceae: Sordariales)	120
<i>Microthyrium</i> (Microthyriaceae: Dothideales)	122
<i>Ophioceras</i> (Magnaporthaceae: Incertae Sedis)	125
<i>Ornatispora</i> (Incertae Sedis: Incertae Sedis)	131
<i>Oxydothis</i> (Incertae Sedis: Incertae Sedis)	133
<i>Paraphaeosphaeria</i> (Phaeosphaeriaceae: Pleosporales)	137
<i>Phaeonectriella</i> (Halosphaeriaceae: Halosphaeriales)	140
<i>Phomatospora</i> (Incertae Sedis: Xylariales)	143
<i>Pseudohalonectria</i> (Magnaporthaceae: Incertae Sedis)	145
<i>Sordaria</i> (Sordariaceae: Sordariales)	149
<i>Tubeufia</i> (Tubeufiaceae: Pleosporales)	150
Chapter 5 Molecular Phylogeny of Magnaporthaceae (Sordariomycetes):	
Implication on taxonomy and phylogenetic placement	
5.1 Introduction	153
5.2 Materials and methods	155
5.2.1 Fungal cultures and DNA extraction	155
5.2.2 PCR amplification and sequencing of 28S and 18S rDNA	156
5.2.3 Phylogenetic analyses	159

TABLE OF CONTENTS (CONTINUED)

	Page
5.3 Results	160
5.3.1 Phylogenies based on 28S rDNA dataset (dataset I)	160
5.3.2 Phylogenies based on 18S rDNA dataset (dataset II)	161
5.3.3 Phylogenies based on 18S rDNA dataset (dataset III)	161
5.3.4 Phylogenies based on the combined dataset (dataset IV)	162
5.4 Discussion	166
5.4.1 Ordinal classification of Magnaporthaceae	166
5.4.2 Intergeneric relationships within Magnaporthaceae	168
5.4.3 Placement of recently described taxa in Magnaporthaceae and <i>Ophioceras chiangdaoensis</i> sp. nov.	171
5.4.4 Magnaporthaceae and their anamorphs	171
5.4.5 Phylogenies of recently described taxa	173
Chapter 6 General discussion and conclusion	
6.1 Bioiversity of pathogenic and saprobic fungi on <i>Dracaena</i> and <i>Pandanus</i>	177
6.2 The relationships between pathogenic and saprobic fungi on <i>Dracaena</i> and <i>Pandanus</i>	179
6.3 Molecular and morphological characters of fungi in family Magnaporthaceae	179
6.4 Future work	180
References	182
Appendix A	212
Appendix B	214
Curriculum Vitae	217

LIST OF TABLES

Table	Page
2.1 Saprobiic fungi showing fungal recurrence on different tissues	12
2.2 Number of fungi and myxomycetes published as occurring on the Pandanaceae (McKenzie <i>et al.</i> 2002)	17
2.3 New fungi described from the Pandanaceae since McKenzie and Hyde 1996	18
2.4 The most common fungal genera recorded on various monocotylenonous hosts	20
2.5 New selected fungi described from various host/habitat in Thailand since 1998	21
3.1 Collection details of saprobic fungi study	28
3.2 Frequency and overall percentage occurrence of fungal taxa occurred on <i>Dracaena louri</i> eri, <i>Pandanus amaryllifolius</i> , <i>P. odoratissimus</i> and <i>P. penetrans</i>	33
3.3 Comparison of the most common fungal taxa recorded on naturally samples and baits of <i>Pandanus penetrans</i> leaves	38
3.4 Similarity of fungal taxa composition between <i>Dracaena loureiri</i> and <i>Pandanus</i> species	39
3.5 Fungi occurrence on different tissues of <i>Pandanus odoratissimus</i> .	42
3.6 Frequency and overall percentage occurrence of fungal taxa on <i>Pandanus penetrans</i> leaves during the succession process.	46
3.7 A comparison of the pathogenic taxa recovered from <i>Dracaena loureiri</i> , <i>Pandanus amaryllifolius</i> and <i>P. penetrans</i> .	51
3.8 Results of pathogenicity test of fungal taxa isolated as endophytes, saprobes or pathogens.	60

LIST OF TABLES (CONTINUED)

Table	Page
4.1 Synopsis of ascospore and appendages of <i>Linocarpon</i> spp. for comparison with new taxa (Thongkantha <i>et al.</i> , 2003)	118
4.2 Species of <i>Ophioceras</i> found on various habitats	126
4.3 A comparison of <i>Ophioceras chiangdaoensis</i> with some other previous described species	128
4.4 Comparisons morphological characters of <i>Pseudohalonestria</i> species (Promputtha <i>et al.</i> , 2004)	147
5.1 Members of the Magnaporthaceae and their anamorphs	155
5.2 Magnaporthaceous taxa and their GenBank accession number used in this study	158
5.3 Results of the phylogenetic analysis of 18S and 28S rDNA	162
5.4 Magnaporthaceae species member accepted by using morphological taxonomy and molecular taxonomy base on 18S, 28S and ITS rDNA sequences analyses	174

LIST OF ILLUSTRATIONS

Figure	Page
1.1 Plants selected for the present study	3
1.2 Schematic presentation of the relationships between chapters of the thesis	4
2.1 General structure and use of <i>Pandanus</i>	8
2.2 The different steps in PCR	24
2.3 The exponential amplification of the gene in PCR	24
2.4 Verification of the PCR product on gel	25
2.5 Ribosomal RNA gene (rDNA) diagrams	26
3.1 Isolation and pathogenicity test of fungal pathogens on <i>Dracaena loureiri</i> and <i>Pandanus</i> spp. leaves	30
3.2 Species area curve for fungi collected on <i>Dracaena loureiri</i> and <i>Pandanus</i> spp. at each sampling times	31
3.3 Three-dimensional correspondence analysis of fungal communities recorded from <i>Dracaena lourieri</i> , <i>Pandanus amaryllifolius</i> , <i>P.</i> <i>odoratissimus</i> and <i>P. penetrans</i>	39
3.4 Three-dimensional correspondence ordinations of fungal communities occurred on <i>Pandanus penetrans</i> leaves that were collected from Chiang Mai and Phayao during 3 seasons	40
3.5 Two-dimensional correspondence analysis of fungal communities occurred on leaves, prop roots and seeds of <i>Pandanus odoratissimus</i> in Rayong Province during cool dry season.	41
3.6 Three dimensional correspondence ordinations of fungal communities occurred on <i>Pandanus penetrans</i> leaves from Suthep Pui National Park that were collected during 3 season of cool dry, hot dry and hot wet as naturally samples, and samples collected during succession stage of decayed at day 0, month 12 and month 18.	43
3.7 Species area curve for fungi collected on <i>Pandanus penetrans</i> leaves at different stages of succession.	45

LIST OF ILLUSTRATIONS (CONTINUED)

Figure	Page
3.8 Three-dimensional correspondence analysis of fungal samples of <i>Pandanus penetrans</i> at different stages of succession	45
3.9 Shannon indices for <i>Pandanus penetrans</i> leaves throughout the experiment	49
3.10 Number of fungal taxa occurring on samples during different stages of decayed	49
3.11 Frequency of dominant fungi occurring on leaves at each sampling time	50
3.12 Appearance of disease symptom on <i>Pandanus penetrans</i> leaves, colony, mycelia, conidiophores and conidia of <i>Acremonium</i> sp.	52
3.13 Appearance of disease symptom on the host leaves: <i>Dracaena loureiri</i> , <i>Pandanus amaryllifolius</i> and <i>P. penetrans</i> . Conidia ooze, conidiophores and conidia of <i>Colletotrichum gloeosporioides</i> . Ascumata, asci and ascospores of <i>Glomerella cingulata</i>	53
3.14 Appearance of disease symptom on the host leaves, conidiophores and conidia of <i>Aspergillus</i> sp.	54
3.15 Appearance of disease symptom on leaf of <i>Dracaena loureiri</i> . Coniophores and conidia of <i>Cladosporium oxysporum</i>	55
3.16 Appearance of disease symptoms on <i>Pandanus penetrans</i> leaf, colony, conidiophores and conidia of <i>Curvularia lunata</i>	56
3.17 Appearance of disease symptoms on the host leaves (<i>Pandanus amaryllifolius</i> and <i>P. penetrans</i>), conidia, chlamydospore, colony, conidiophore and of <i>Fusarium oxysporum</i>	57
3.18 Appearance of disease symptoms on the host leaves (<i>Dracaena loureiri</i> , <i>Pandanus amaryllifolius</i> and <i>P. penetrans</i>) asci, ascospores and colony of <i>Guignardia</i> sp.	58
3.19 Appearance on <i>Pandanus penetrans</i> leaf, colony, asci and ascospores of <i>Oxydothis</i> sp.	59

LIST OF ILLUSTRATIONS (CONTINUED)

Figure	Page
3.20 Appearance of disease symptom on <i>Pandanus penetrans</i> leaf, colonies on culture, conidiophores, conidia and chlamydospores of <i>Penicillium</i> sp.	60
3.21 Appearance of disease symptom on <i>Pandanus amaryllifolius</i> leaf. <i>Colletotrichum gloeosporioides</i> : Isolated culture; No disease symptom on tested leaves that without wound; Disease symptom on wounds of tested leaf; Reisolation of fungus from diseased lesions.	61
3.22 1. Appearance of disease symptom on <i>Pandanus penetrans</i> leaf. 2. Isolated culture of <i>Curvularia lunata</i> . 3. Disease symptom on wounds of tested leaf. 4. Reisolation of fungus from diseased lesions.	62
3.23 1. Appearance of disease symptom on <i>Pandanus amaryllifolius</i> leaf. 2. Isolated culture of <i>Guignardia</i> sp. 3. No disease symptom on tested leaves that without wounding. 4. Disease symptom on wounds of tested leaf. 5. Reisolation of fungi from diseased lesions.	62
Descriptions and photographic figures of anamorphic fungi	
4.1 <i>Canalisporium</i>	72
4.2 <i>Dictyochoeta</i>	74
4.3 <i>Ellisembia</i>	76
4.4 <i>Exerohilum</i>	77
4.5 <i>Memnoniella</i>	79
4.6 <i>Myrothecium</i>	82
4.7 Diagrammatic representation of conidiophores, conidiogenous cells and conidia of <i>Myrothecium cintum</i> and <i>M. pandanicola</i>	82

LIST OF ILLUSTRATIONS (CONTINUED)

Figure	Page
4.8 <i>Paecilomyces</i>	84
4.9 <i>Periconia</i>	87
4.10 <i>Periconiella</i>	89
4.11 <i>Phaeostalagmus</i>	90
4.12 <i>Phialocephala</i>	92
4.13 <i>Sporidesmium</i>	94
4.14 <i>Stachybotrys</i>	97
4.15 <i>Trichothecium</i>	99
4.16 <i>Veronaea</i>	100
4.17 <i>Zygosporium</i>	106
Descriptions and photographic figures of Ascomycetes	
4.18 <i>Astrosphaeriella</i> (Melanommataceae: Dothideales)	108
4.19 <i>Chaetosphaeria</i> (Chaetomiaceae: Sordariales)	110
4.20 <i>Emericella</i> (Trichocomaceae: Eurotiales)	112
4.21 <i>Linocarpon lamiae</i> (Hyponectriaceae: Incertae Sedis)	114
4.22 <i>Linocarpon siamensis</i> Thongkantha, sp. nov.	117
4.23 <i>Linocarpon suthepensis</i> Thongkantha, sp. nov.	117
4.24 <i>Melanochaeta</i> (Chaetosphaeriaceae: Sordariales)	121
4.25 <i>Microthyrium</i> sp. 1 (Microthyriaceae: Dothideales)	123
4.26 <i>Microthyrium</i> sp. 2	124
4.27 <i>Ophioceras</i> (Magnaporthaceae: Incertae Sedis)	129
4.28 Some species of <i>Ophioceras</i> described by Conway and Barr (1977), Shearer <i>et al.</i> (1999), Teng (1934) and Tsui <i>et al.</i> (2001)	130
4.29 <i>Ornatispora</i> (Incertae Sedis, Incertae Sedis)	132
4.30 <i>Oxydothis</i> (Incertae Sedis, Incertae Sedis)	136
4.31 <i>Paraphaeosphaeria</i> (Pleosporales, Phaeosphaeriaceae)	139

LIST OF ILLUSTRATIONS (CONTINUED)

Figure	Page
4.32 <i>Phaeonectriella</i> (Halosphaeriales, Halosphaeriaceae)	142
4.33 <i>Phomatospora</i> (Xylariales, Incertae Sedis)	144
4.34 <i>Pseudohalonectria</i> (Incertae Sedis, Magnaporthaceae)	147
4.35 All species of <i>Pseudohalonectria</i> previously described by Cai <i>et al.</i> (2002), Hyde <i>et al.</i> (1999c), Ono and Kobayashi (2001), Promputta <i>et al.</i> (2004a), and Shearer (1989).	148
4.36 <i>Sordaria</i> (Sordariales, Sordariaceae)	150
4.37 <i>Tubeufia</i> (Pleosporales, Tubeufiaceae)	152
5.1 Primers for amplification and sequencing partial 28S rDNA	157
5.2 Primers for amplification and sequencing partial 18S rDNA	157
5.3 One of the best bayesian trees resulting from analysis of alignment I (28S rDNA-73 taxa) for the major order of the Ascomycetes. The numbers above the branches indicate MP1 bootstrap support proportions from 1000 replicates and numbers below the branches indicate pooled posterior probabilities	163
5.4 One of the best bayesian trees resulting from analysis of alignment III (18S rDNA-65 taxa). The numbers above the branches indicate MP1 bootstrap support proportions from 1000 replicates and numbers below the branches indicate pooled posterior probabilities	164
5.5 One of the best bayesian trees resulting from analysis of alignment IV (combine 18S and 28S rDNA-51 taxa). The numbers above the branches indicate MP1 bootstrap support proportions from 1000 replicates and numbers below the branches indicate pooled posterior probabilities	165

ABBREVIATIONS AND SYMBOLS

g	gram
L	liter
mg	milligram
min	minute
ml	milliliter
MW	molecular weight
ng	nanogram
No.	number
PDA	potato dextrose agar
rpm	rotation per minute
sec	second
UV	ultraviolet
w/v	weight by volume
WA	water agar
°C	degree Celsius
α	alpha
β	beta
μg	microgram
μl	microlitre
μm	micrometer
